INTRODUCTION

The development plan for the Farm Credit office building in Louisville, KY shows an office expansion of 138,000 square feet. **Figure 1** displays a map of the site. The site is currently occupied with 177,000 square feet of office. The building expansion is on an existing surface parking lot. Access to the development will be from the existing access on Lakefront Place and Sycamore Station Place. The purpose of this study is to examine the traffic impacts of the development upon the adjacent highway system. For this study, the impact area was defined to be the intersections of Tucker Station Road with Lakefront Place and Sycamore Station Place.

Figure 1. Site Map

EXISTING CONDITIONS

Tucker Station Road is a Metro maintained road with an estimated 2022 ADT of 8,300 vehicles per day between Lakefront Place and Sycamore Station Place as estimated from the turning movement count. The road is a two-lane road with twelve-foot lanes, a two-way left turn lane with curb and gutter. The speed limit is 35 mph. There are sidewalks on the north side. The intersections with Lakefront Place and Sycamore Station Place are controlled with a stop sign. At both intersections there are left turn lanes on Tucker Station Road. There is a right turn lane on eastbound Bluegrass Parkway, northbound Tucker Station Road, and southbound Sycamore Station Place.

Peak hour traffic counts for the intersections were obtained on Thursday, November 3, 2022. The a.m. peak hour occurred between 7:30 and 8:30 and the p.m. peak hour occurred between 4:30 and 5:30. **Figure 2** illustrates the existing a.m. and p.m. peak hour traffic volumes.

Figure 2. Existing Peak Hour Volumes

FUTURE CONDITIONS

The project completion date is 2024. An annual growth rate of 1.0 percent was applied to the volumes. **Figure 3** displays the 2024 No Build peak hour volumes.

Figure 3. No Build Peak Hour Volumes

TRIP GENERATION

The Institute of Transportation Engineers Trip Generation Manual, 11th Edition contains trip generation rates for a wide range of developments. The land use of “Office 710” was reviewed and determined to be the best match. The trip generation results are listed in **Table 1**. The trips were assigned to the highway network with the percentages shown in **Figure 4**. **Figure 5** shows the trips generated by this development and distributed throughout the road network during the peak hours. **Figure 6** displays the individual turning movements for the peak hours when the development is completed.

Table 1. Peak Hour Trips Generated by Site

Land Use	A.M. Peak Hour			P.M. Peak Hour		
	Trips	In	Out	Trips	In	Out
Office (138,000 square feet)	221	194	27	217	37	180

Figure 4. Trip Distribution Percentages

Figure 5. Peak Hour Trips Generated by Site

Figure 6. Build Peak Hour Volumes

ANALYSIS

The qualitative measure of operation for a roadway facility or intersection is evaluated by assigning a “Level of Service”. Level of Service is a ranking scale from A through F, “A” is the best operating condition and “F” is the worst. Level of Service results depend upon the facility that is analyzed. In this case, the Level of Service is based upon the total delay experienced at an intersection.

To evaluate the impact of the proposed development, the vehicle delays at the intersections were determined using procedures detailed in the Highway Capacity Manual, 7th edition. Future delays and Level of Service were determined for the intersections using the HCS Streets and TWSC (version 2023) software. The delays and Level of Service are summarized in **Table 2**.

Table 2. Peak Hour Level of Service

Approach	A.M.			P.M.		
	2022 Existing	2024 No Build	2024 Build	2022 Existing	2024 No Build	2024 Build

Tucker Station Road at Sycamore Station Place						
Tucker Station Road Eastbound (left)	A 9.0	A 9.0	A 9.3	A 7.9	A 7.9	A 7.9
Sycamore Station Place Southbound	B 12.1	B 12.2	B 12.7	B 10.9	B 11.0	B 12.0

Key: Level of Service, Delay in seconds per vehicle

The intersection of Bluegrass Parkway/Tucker Station Road with Lakefront Place/Tucker Station Road will experience significant minor street delays. Additional lanes will not reduce the delay below Level of Service F. The only improvement that will reduce the minor street delay is a traffic signal. The intersection does currently meet the Manual on Uniform Traffic Control Devices Warrant 1 B for three of the four hours counted. Metro Traffic Engineering should continue to monitor the intersection volumes to determine when the signal warrant has been satisfied.

CONCLUSIONS

Based upon the volume of traffic generated by the development and the amount of traffic forecasted for the year 2024, there will be an impact to the existing highway network. The minor street delays on Lakefront Place and Tucker Station Road will exceed reasonable levels. The intersection of Bluegrass Parkway/Tucker Station Road with Lakefront Place/Tucker Station Road should continue to be monitored to determine when the signal warrant has been satisfied.

Analysis Year	2024							North/South Street				Sycamore Station Place				
Time Analyzed	PM Peak Build							Peak Hour Factor				0.95				
Intersection Orientation	East-West							Analysis Time Period (hrs)				0.25				
Project Description	Farm Credit															
Lanes																
Major Street: East-West																
Vehicle Volumes and Adjustments																
Approach	Eastbound				Westbound				Northbound				Southbound			
Movement	U	L	T	R	U	L	T	R	U	L	T	R	U	L	T	R
Priority	1U	1	2	3	4U	4	5	6		7	8	9		10	11	12
Number of Lanes	0	1	1	0	0	0	1	0		0	0	0		1	0	1
Configuration		L	T					TR						L		R
Volume (veh/h)		75	666				236	8						33		157
Percent Heavy Vehicles (%)		3												0		2
Proportion Time Blocked																
Percent Grade (%)													0			
Right Turn Channelized													No			
Median Type Storage					Left Only								1			
Critical and Follow-up Headways																
Base Critical Headway (sec)		4.1												7.1		6.2
Critical Headway (sec)		4.13												6.40		6.22
Base Follow-Up Headway (sec)		2.2												3.5		3.3
Follow-Up Headway (sec)		2.23												3.50		3.32
Delay, Queue Length, and Level of Service																
Flow Rate, v (veh/h)		79												35		165
Capacity, c (veh/h)		1302												322		786
v/c Ratio		0.06												0.11		0.21
95% Queue Length, Q ₉₅ (veh)		0.2												0.4		0.8
Control Delay (s/veh)		7.9												17.5		10.8
Level of Service (LOS)		A												C		B
Approach Delay (s/veh)	0.8												12.0			
Approach LOS	A												B
