Beth,

I have reviewed the proposed plan and compare the trip generation below. For the previous study I used 30 multi-family units and the proposal is now for 47 units.

Land Use	A.M. Peak Hour			P.M. Peak Hour		
	Trips	In	Out	Trips	In	Out
Single-Family (119 units)	89	22	67	120	76	44
Multi-Family (30 units)	15	3	12	20	13	7
TOTAL	104	25	79	140	89	51
Multi-Family (47 units)	37	9	28	41	26	15
Increase	22	6	16	21	13	8

For the turn lane analysis, the pm peak hour would add $13 \times 0.85 = 11$ left turns. The updated turn lane spreadsheet is attached.

Let me know if anything additional is needed for this case.

Diane B. Zimmerman, P.E.
