

3.6 The old carriage house on the property was not inspected. Judging from the look of it, you will likely need to tear it down and start over with a new structure. I would speak with a contractor about your options of repair vs replacement. Note- You do have water and gas running out to the old building, so be sure these are properly disconnected before you do anything to the carriage house.

This sign was on
the carriage
house door when
we purchased the
home.
