Center For Neighborhoods

Neighbor Map from Center For Neighborhoods

Multiple Data Sources - One Website

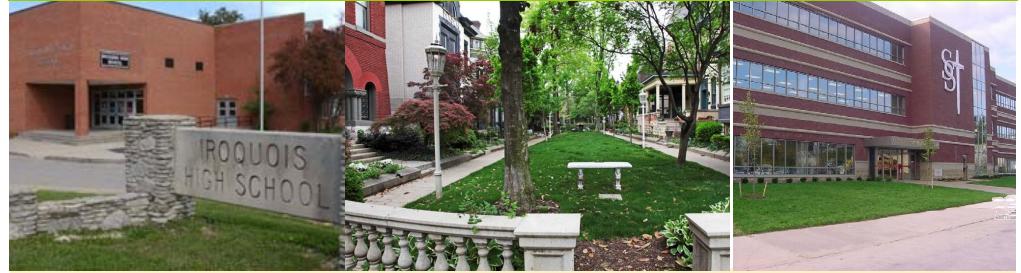

With the creation of Center For Neighborhoods' new website we have launched a contemporary platform that will allow neighborhood residents and community partners to access multiple public data sources through one easy to use site. As Neighbor Map reaches full site build out residents will be able to add their own neighborhood specific data through new apps and CFN staff

Informed Decision Making

The Center For Neighborhoods empowers neighborhood leaders to make well-informed decisions by sharing knowledge between neighborhoods, providing referrals and compiling comprehensive data and powerful mapping. Engaged residents informed with clear information and visuals reinforce a healthy community and support a higher quality of life in Louisville. Neighbor Map will be that online resource for Louisville neighborhoods.

Identifying Neighborhood Assets

Center For Neighborhoods has worked with the Smoketown Neighborhood and partner organizations including Kentuckians for the Commonwealth to collect information on resident-identified neighborhood assets. This data was then added to Neighbor Map allowing stakeholders to view this new data in relation with existing GIS data including streets, buildings, Council Districts, Census demographics and more. Neighbor Map will expand, neighborhood by neighborhood, to identify and map assets including community centers, retail, restaurants, social service agencies, healthcare providers, daycare centers and others. Additional data that can be added may include ABC data, licensed business locations, vacant properties, environmental data and more.
