EROSION PREVENTION AND SEDIMENT CONTROL NOTES:

The approved erosion prevention and sediment control (EPSC) plan shall be implemented prior to any land-disturbing activity on the construction site. Any modifications to the approved EPSC plan must be reviewed and approved by MSD's Private Development Review office. EPSC BMP's shall be installed per the plan and MSD Standards.

Detention basins, if applicable, shall be constructed first and shall perform as sediment basins during construction until the contributing drainage areas are seeded and stabilized.

Actions must be taken to minimize the tracking of mud and soil from construction areas onto public roadways. Soil tracked onto the roadway shall be removed daily.

Soil stockpiles shall be located away from streams, ponds, swales and catch basins. Stockpiles shall be seeded, mulched, and adequately contained through the use of silt fence.

All stream crossings must utilize low-water crossing structures per MSD Standard Drawing ER-02.

Sediment-laden groundwater encountered during trenching, boring, or other excavation activities shall be pumped to a sediment trapping device prior to being discharged into a stream, pond, swale, or catch basin.

Where construction or land disturbing activity will or has temporarily ceased on any portion of a site, temporary site stabilization measures shall be required as soon as practicable, but no later than 14 calendar days after the activity as ceased.

After completion of site work and site stabilization, developer/contractor is required to dredge sediment basin and restore to approved elevations and volume. 'As Builts' may be required.
