<i>Appendix G:</i>	Location Plan showing Louisville Loop crossing Pond Station Road

This study was conducted to analyze the impact of the construction of a proposed warehouse facility at 3101 Pond Station Road in Louisville, Kentucky. The warehouse facility will consist of a 500,000 +/- S.F. building footprint. Access to the new warehouse facility is proposed via the east end of Pond Station Road.

Traffic counts were not collected at the study intersection due to the COVID pandemic. Based on coordination with City of Louisville staff, the study was performed based on previously performed traffic KYTC count data on Stonestreet Road, traffic count data in a previous study performed at the interchange of KY-841 and Stonestreet Road, and Institute of Transportation Engineers Trip Generation Manual estimates of existing and proposed site traffic along Pond Station Road. These counts were used to develop projected no-build and build scenario traffic volumes. Intersection capacity analyses for the opening year (2021) projected future year (2026) peak-hour traffic volumes were conducted at the study area intersections for build and no-build scenarios. Traffic signal warrant analysis was performed at the study intersection in accordance with the Manual of Uniform Traffic Control Devices. In addition, qualitative evaluation of pedestrian crossing across Pond Station Road was performed at the proposed Louisville Loop.

The following findings were made during the traffic impact study process:

1. Capacity analyses with existing stop sign control indicated that the vehicles exiting Pond Station Road onto Stonestreet Road are expected to operate at LOS "F" during the 2021 and 2026 peak hour no-build and build scenarios. The southbound left-turning vehicles from Stonestreet Road onto Pond Station Road are expected to operate at no worse than LOS "B" during the 2021 and 2026 peak hour no-build and build scenarios.
2. Traffic signal warrant analyses at the intersection of Stonestreet Road and Pond Station Road indicated a traffic signal is warranted in accordance with the peak hour signal warrant of the Manual of Uniform Traffic Control Devices (MUTCD), 2009.
3. Additional capacity analyses with a traffic signal at the intersection of Stonestreet Road and Pond Station Road indicated that the individual movements are expected to operate at no worse than LOS "D" for both the 2021 and 2026 AM and PM peak hour build scenarios. The volume to capacity ratio for the northbound approach on Stonestreet Road is expected to be 0.958 for 2026 PM peak hour build scenario.
4. Per the preliminary alignment plan provided by the City of Louisville's consultant, the planned Louisville Loop is proposed to cross Pond Station Road within the curve just east of the Copart access. As part of the Louisville Loop design process, special attention will need to be given to locating the crossing at the point that provides the best visibility from each roadway approach as well as clearing trees and providing adequate warning signs and markings to warn drivers of the crossing. Consideration should also be given to measures that will reduce vehicle speeds prior to reaching the crossing point. Vehicles traveling to and from the proposed warehouse facility at

3101 Pond Station Road are expected to be the only vehicles crossing the proposed path. Based on these relatively low volumes, it is not anticipated that bicyclists and pedestrians will have significant difficulty finding gaps in which to make their crossings.

The following improvements are recommended to mitigate the impacts of the construction of the new warehouse facility:

1. Site access should be provided via the east end of Pond Station Road.
2. A two-phase traffic signal is recommended at the intersection of Stonestreet Road and Pond Station Road. Due to the proximity of the existing railroad crossing across Stonestreet Road just north of Pond Station Road, the signal will need to be designed to provide railroad preemption upon notification of an approaching train.
3. Because of high volume to capacity ratios on Stonestreet Road with the installation of a traffic signal at Pond Station Road, local public agencies should consider the widening of Stonestreet Road in the near future to provide two travel lanes in each direction.

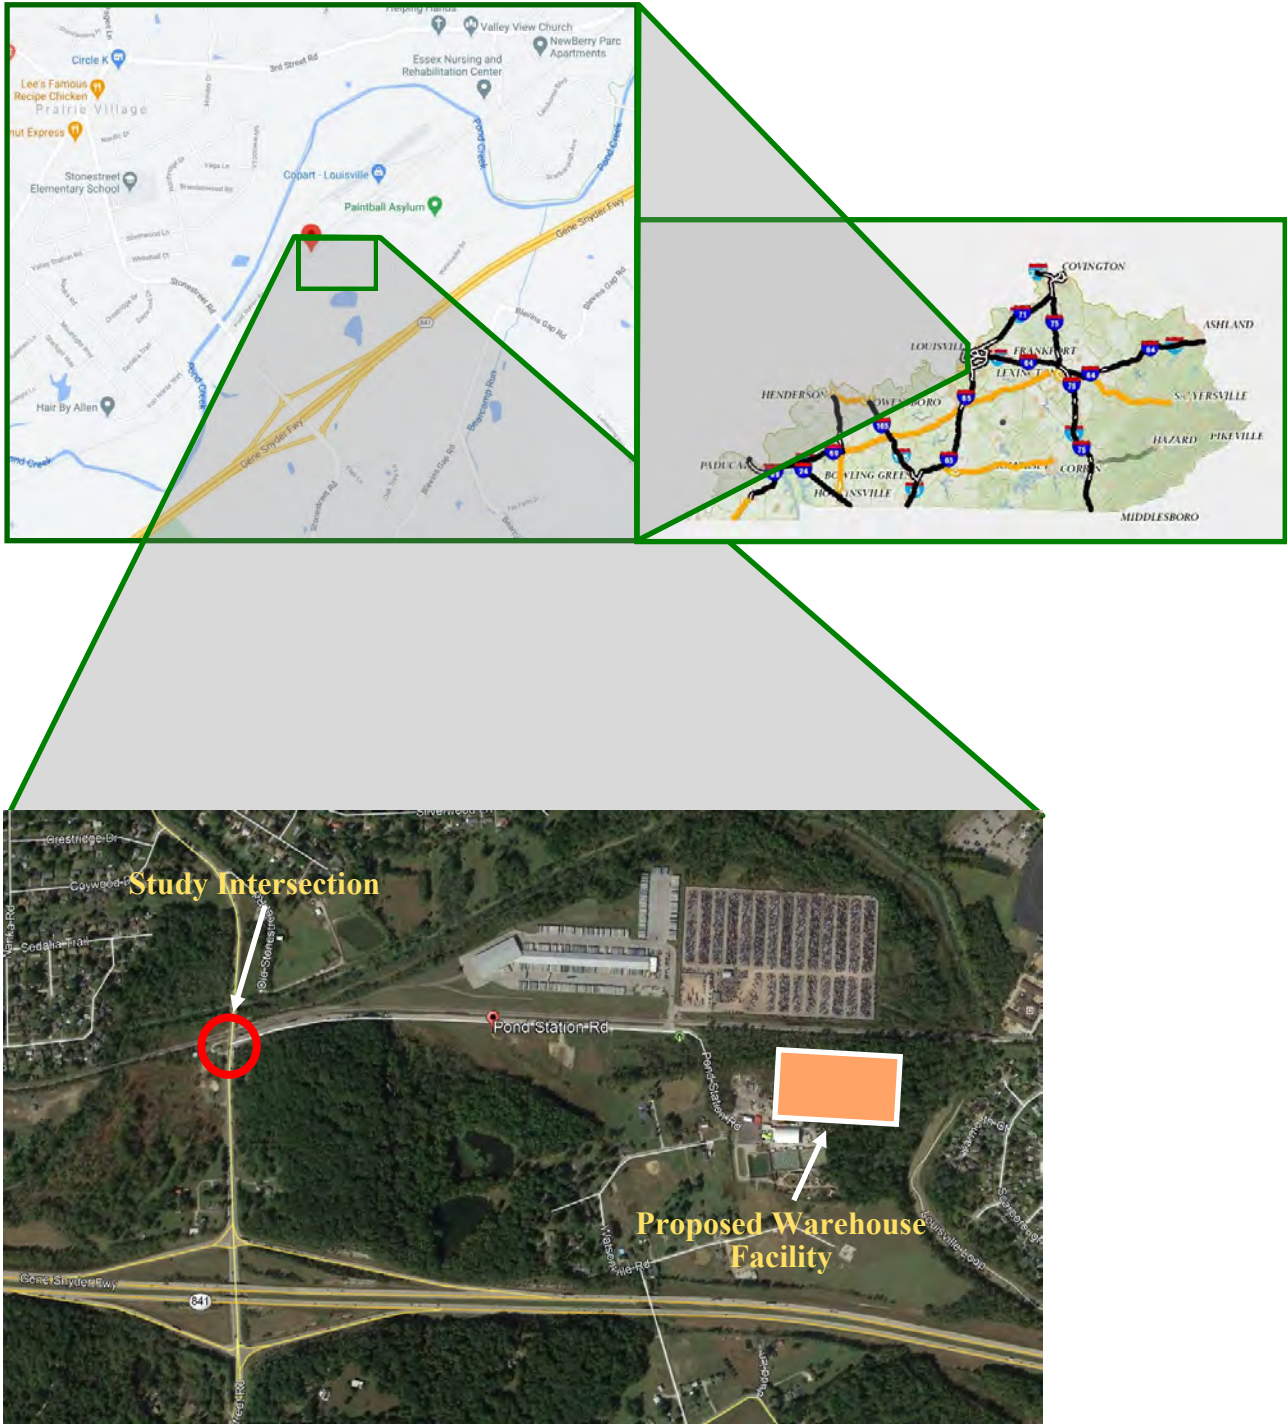

This study was conducted to analyze the impact of the construction of a proposed warehouse facility at 3101 Pond Station Road in Louisville, Kentucky. The warehouse facility will consist of a 500,000 +/- S.F. building footprint. Access to the new warehouse facility is proposed via the east end of Pond Station Road. Traffic counts were not collected at the study intersection due to the COVID pandemic. Based on coordination with City of Louisville staff, the study was performed based on previously performed traffic KYTC count data on Stonestreet Road, traffic count data in a previous study performed at the interchange of KY-841 and Stonestreet Road, and Institute of Transportation Engineers Trip Generation Manual estimates of existing and proposed site traffic along Pond Station Road. These counts were used to develop projected no-build and build scenario traffic volumes. Intersection capacity analyses for the opening year (2021) projected future year (2026) peak-hour traffic volumes were conducted at the study area intersections for build and no-build scenarios. This report includes recommended roadway improvements to accommodate the projected traffic volumes. A Project Location Map is provided as Figure 2A.

2.1 DEVELOPMENT DESCRIPTION

The proposed warehouse facility will consist of a 500,000 +/- S.F. building footprint. Site access is to be provided via the east end of Pond Station Road. A preliminary site plan is included in Appendix A.

2.2 STUDY AREA

Based on the coordination with the City of Louisville, the intersection of Stonestreet Road and Pond Station Road is the only study intersection required for analysis.

Project Location Map

3.1 AREA LAND USE

The land surrounding the site is a mix of single-family residential housing and industrial facilities. An existing Copart facility is located to the north of the site and can be accessed via Pond Station Road. There is an additional Copart facility expansion and four potential future offsite warehouses planned to the north of and south of Pond Station Road respectively.

3.2 SITE ACCESSIBILITY

Pond Station Road is a two lane roadway with a stop-control at the study intersection. Stonestreet Road is classified as a minor arterial, has one travel lane in each direction, and has a posted speed limit of 35 miles per hour. At the intersection with Pond Station Road, Stonestreet Road has a center two way left turn lane and a northbound right turn lane. An at-grade crossing with CSX railroad exists across Stonestreet Road just north of Pond Station Road. Per the site plan, access to the site will be via the east end of Pond Station Road.

3.3 EXISTING TRAFFIC VOLUMES

Turning movement counts were not collected at the study intersection due COVID-19 pandemic. Peak hour background volumes were estimated based on previously performed KYTC traffic count data in 2018 on Stonestreet Road, and traffic count data from previous study performed at the interchange of KY -841 and Stonestreet Road. These traffic counts are included in Appendix B.

The AADT on Stonestreet Road based on the KYTC traffic count data was 16,078. The K-factor of 11% from the traffic count data gives the proportion of AADT that occurs in the peak hour and which is approximately equal to 1770 vph. As per the previous study performed at the interchange of KY-841 and Stonestreet Road, it was assumed that the peak hour occurs in the PM and that 55% of traffic travels away from SR 841 in the PM. Also, from the above study, AM peak traffic was approximately 78% of the PM peak traffic, resulting in 1381 vph in the AM peak hour. The directional distribution from the same study showed also showed that 35% of traffic travels away from the SR 841 in the AM. The resulting 2018 background volumes on Stonestreet Road are presented in Figure 3A.

LEGEND:
xx → AM PEAK VOLUMES
(xx) → PM PEAK VOLUMES

2018 Background Traffic Volumes

4.1 PROJECTED NO-BUILD TRAFFIC VOLUMES

Based on discussion with City of Louisville, a 1% growth rate was applied to the 2018 background traffic volumes and compounded annually to get the projected opening year(2021) and future design year(2026) background traffic volumes as shown in Figure 4A and 4B respectively. The trips from the existing and proposed industrial development to the north and south of the Pond Station Road are included in the no-build traffic volumes. These industrial developments include the following:

- Existing Copart facility north of Pond Station Road with an approximate total area of 27 acres
- Proposed Copart facility expansion north of Pond Station Road with an approximate total area of 45 acres
- Proposed offsite warehouse south of Pond Station Road with an approximate building area of 85,100 sf
- Proposed offsite warehouse south of Pond Station Road with an approximate building area of 62,050 sf
- Potential future offsite warehouse south of Pond Station Road with an approximate building area of 150,000 sf
- Potential future offsite warehouse south of Pond Station Road with an approximate building area of 400,000 sf

The trips for the existing and proposed Copart facility north of the Pond Station Road were estimated based on the counts from a similar Copart facility in Palmdale, California. A trip generation rate of 0.52 trips/ acre was used for AM peak and 0.57 trips/acre was used for the PM peak. The trip generation from the Copart facility in Palmdale, California are included in Appendix C of this report.

The trip generation for the existing and proposed Copart facility north of Pond Station Road are shown in Table 4A and 4B respectively.

	Entering Trips	Exiting Trips	Total Trips
AM Peak	10	4	14
PM Peak	6	9	15

Table 4A - Trip generation from the existing 27 acres Copart facility north of the Pond Station Road

	Entering Trips	Exiting Trips	Total Trips
AM Peak	16	7	23
PM Peak	10	16	26

Table 4B - Trip generation from the proposed 45 acres Copart facility north of the Pond Station Road

The trips for the four proposed Offsite-Warehouses south of the Pond Station Road were estimated using the Institute of Transportation Engineers (ITE) Trip Generation Manual, 10th Edition. These trips are shown in Tables 4C-4F. Warehouse (Land Use Code 150) was applicable to these facilities.

	Entering Trips	Exiting Trips	Total Trips
AM Peak	27	9	36
PM Peak	10	28	38

Table 4C - Trip generation from the proposed 85,100 S.F. Offsite Warehouse south of the Pond Station Road

Table 4E- Trip generation from the proposed 150,000 S.F. Offsite Warehouse south of the Pond Station Road

	Entering Trips	Exiting Trips	Total Trips
AM Peak	56	17	73
PM Peak	20	56	76

Table 4F- Trip generation from the proposed 400,000 S.F. Offsite Warehouse south of the Pond Station Road

The graphs from the ITE manual are included in Appendix C of this report. The trips from the existing and proposed industrial development included in Tables 4A-4F are added to get the no-build trips entering and exiting the Pond Station Road. The no-build trips at Pond Station Road are shown in Table 4G. The no-trips in Table 4G are distributed at the study intersection using the proposed trip distribution in Figure 4C and are shown in Figure 4D. The projected 2021 and 2026 background traffic volumes in Figures 4A & 4B are combined with the no-build trips entering and exiting the Pond Station Road to get the no-build traffic volumes at the study intersection. The projected 2021 and 2026 no-build traffic volumes are shown in Figures 4E & 4F respectively.

	Entering Trips	Exiting Trips	Total Trips
AM Peak	167	55	222
PM Peak	67	169	236

Table 4G - Total No-Build trips on Pond Station Road

4.2 ESTIMATED SITE-GENERATED TRAFFIC VOLUMES

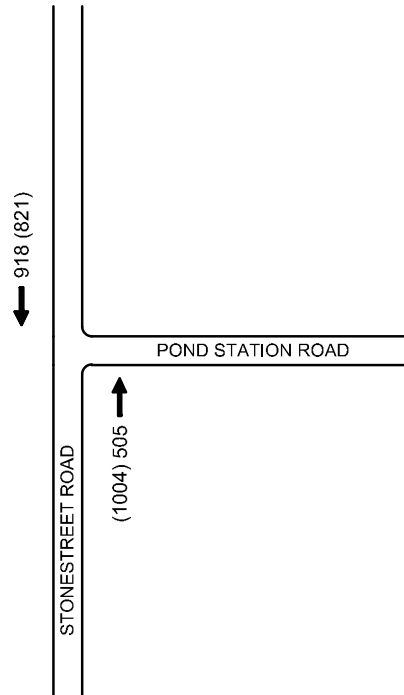

Site generated trips were estimated for the warehouse facility with a proposed footprint of 500,200 S.F. The Institute of Transportation Engineers (ITE) Trip Generation Manual, 10th Edition, was used to estimate trips for this land use. Warehouse (Land Use Code 150) was applicable to this facility. According to the data, ITE estimates 85 AM peak trips (65 entering and 20 exiting) and 88 PM peak trips (24 entering and 64 exiting). The graphs from ITE manual are included in Appendix D of this report. The estimated trips were distributed at the study intersection according to the proposed trip distribution percentages and are shown in Figure 4G.

4.3 PROJECTED BUILD TRAFFIC VOLUMES

The projected 2021 and 2026 no-build traffic volumes were added to the proposed warehouse facility traffic volumes to get the projected 2021 and 2026 build traffic volumes. The projected 2021 and 2026 build traffic volumes are shown in Figure 4H & 4I respectively.

2026 Build Traffic Volumes

Projected opening year and future design year no-build and build scenario traffic volumes were analyzed at the study intersection to determine the impacts of the proposed school project. Highway Capacity Software was used to determine the Level of Service (LOS). The LOS represents an intersection’s measure of effectiveness and is used to determine the impacts on the intersection from the proposed development. LOS values range from “A” (best) to “F” (failing).

5.1 CAPACITY ANALYSES

The projected traffic volumes were analyzed, using Highway Capacity Software, on the study intersection for the existing intersection configuration. The capacity analyses results for the opening year and future design year no-build and build scenarios are presented in Table 5A. The capacity analysis reports are provided in Appendix D of this report.

		Eastbound			Westbound			Northbound			Southbound			INT.
		LT	THRU	RT	LT	THRU	RT	LT	THRU	RT	LT	THRU	RT	
Stonestreet Road & Pond Station Road Intersection, 2021, No-Build	AM				51.6						9.2			
	PM				F						A			
Stonestreet Road & Pond Station Road Intersection, 2021, Build	AM				720.0						11.1			
	PM				F						B			
Stonestreet Road & Pond Station Road Intersection, 2026, No-Build	AM				77.7						9.5			
	PM				F						A			
Stonestreet Road & Pond Station Road Intersection, 2026, Build	AM				1160.7						11.3

Stonestreet Road & Pond Station Road Intersection, 2026, Build	AM				1404.1						11.7			
	PM				F						B			

Table 5A: Capacity Analyses Summary with Existing Stop Sign Control

According to the analysis, capacity analyses with existing signal control indicated that the vehicles exiting the Pond Station Road onto Stonestreet Road are expected to operate at LOS “F” during the 2021 and 2026 peak hour no-build and build scenarios. The southbound left-turning vehicles from Stonestreet Road onto Pond Station Road are expected to operate at no worse than LOS “B” during the 2021 and 2026 peak hour no-build and build scenarios.

To mitigate the delays for the vehicles exiting Pond Station Road, additional analyses were done with a traffic signal at the intersection of Stonestreet Road and Pond Station Road. These analyses indicated that the individual movements are expected to operate at no worse than LOS “D” for the 2026 AM and PM peak hour build scenarios. The capacity analyses results presented in Table 5B. The capacity analysis reports are included in Appendix E of this report.

		Eastbound			Westbound			Northbound			Southbound			INT.

Table 5B: Capacity Analyses Summary with a Traffic Signal at Intersection of Stonestreet Road & Pond Station Road

5.2 TRAFFIC SIGNAL WARRANT ANALYSIS

Traffic signal warrant analysis was performed at the intersection of Stonestreet Road and Pond Station Road in accordance with the Manual of Uniform Traffic Control Devices. According to the analysis, a traffic signal is warranted by the peak hour signal warrant. The traffic signal analysis report is included in Appendix F of this report.

5.3 EVALUATION OF THE PEDESTRIAN CROSSING AT THE LOUISVILLE LOOP

The Louisville Loop is a network of shared-use paths with emphasis on bike lanes and soft surface trails on roadways. In the area of the proposed development, the Loop is proposed to run along the south side of Pond Station Road from Stonestreet Road to a point approximately 200 feet east of the access to the existing Copart facility, at which point, the path crosses Pond Station Road and runs along the south side of CSX Railroad. Per the preliminary alignment plan provided by the City of Louisville's consultant, the path is proposed to cross Pond Station Road within the curve just east of the Copart access. As part of the Louisville Loop design process, special attention will need to be given to locating the crossing at the point that provides the best visibility from each roadway approach as well as clearing trees and providing adequate warning signs and markings to warn drivers of the crossing. Consideration should also be given to measures that will reduce vehicle speeds prior to reaching the crossing point. Vehicles traveling to and from the proposed warehouse facility at 3101 Pond Station Road are expected to be the only vehicles crossing the proposed path. Based on the ITE Trip Generation calculations in this study, it is estimated that there will be 85 vehicles crossing the path during the AM peak and 88 vehicles crossing the path during the PM peak. The times that the highest levels of delay are expected are during the shift change times for the warehousing facility. Based on these relatively low volumes, it is not anticipated that bicyclists

and pedestrians will have significant difficulty finding gaps in which to make their crossings. The proposed location where the Louisville Loop crosses the Pond Station Road is shown in Appendix G.

6.1 FINDINGS

The following findings were made during the traffic impact study process:

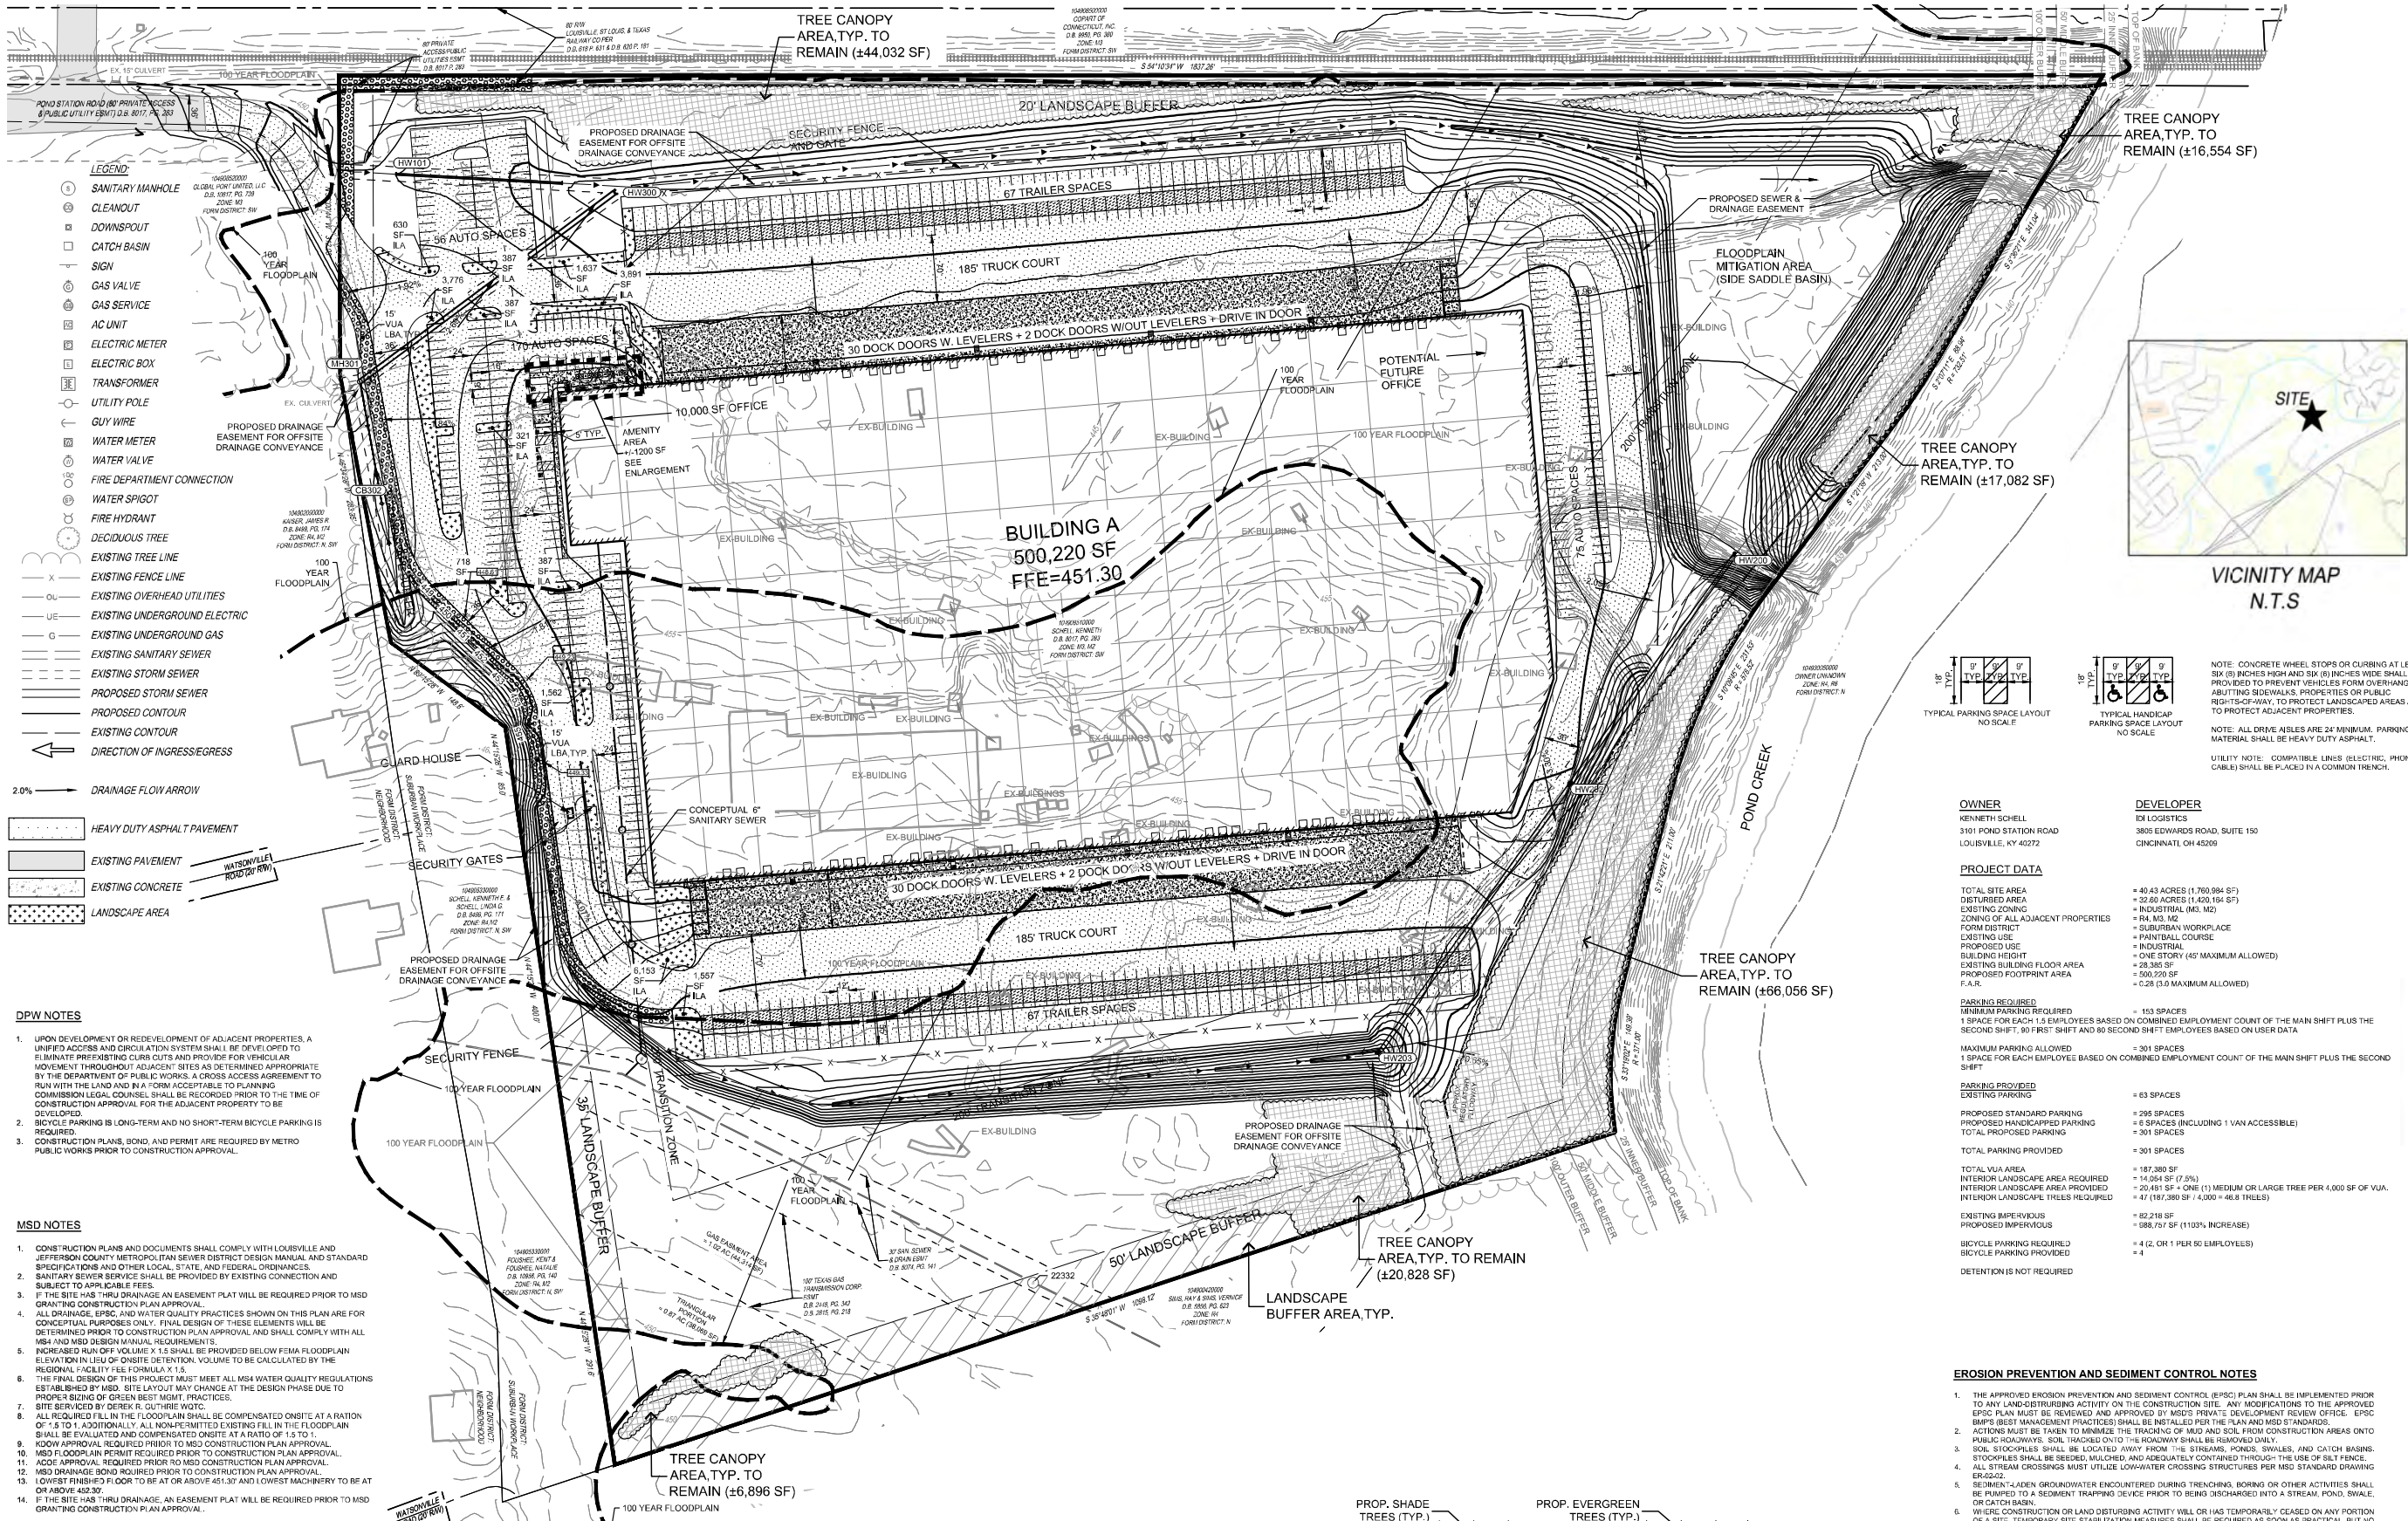

1. Capacity analyses with existing stop sign control indicated that the vehicles exiting Pond Station Road onto Stonestreet Road are expected to operate at LOS "F" during the 2021 and 2026 peak hour no-build and build scenarios. The southbound left-turning vehicles from Stonestreet Road onto Pond Station Road are expected to operate at no worse than LOS "B" during the 2021 and 2026 peak hour no-build and build scenarios.
2. Traffic signal warrant analyses at the intersection of Stonestreet Road and Pond Station Road indicated a traffic signal is warranted in accordance with the peak hour signal warrant of the Manual of Uniform Traffic Control Devices (MUTCD), 2009.
3. Additional capacity analyses with a traffic signal at the intersection of Stonestreet Road and Pond Station Road indicated that the individual movements are expected to operate at no worse than LOS "D" for both the 2021 and 2026 AM and PM peak hour build scenarios. The volume to capacity ratio for the northbound approach on Stonestreet Road is expected to be 0.958 for 2026 PM peak hour build scenario.
4. Per the preliminary alignment plan provided by the City of Louisville's consultant, the planned Louisville Loop is proposed to cross Pond Station Road within the curve just east of the Copart access. As part of the Louisville Loop design process, special attention will need to be given to locating the crossing at the point that provides the best visibility from each roadway approach as well as clearing trees and providing adequate warning signs and markings to warn drivers of the crossing. Consideration should also be given to measures that will reduce vehicle speeds prior to reaching the crossing point. Vehicles traveling to and from the proposed warehouse facility at 3101 Pond Station Road are expected to be the only vehicles crossing the proposed path. Based on these relatively low volumes, it is not anticipated that bicyclists and pedestrians will have significant difficulty finding gaps in which to make their crossings.

6.2 RECOMMENDATIONS

The following improvements are recommended to mitigate the impacts of the construction of new warehouse facility: :

1. Site access should be provided via the east end of Pond Station Road.
2. A two-phase traffic signal is recommended at the intersection of Stonestreet Road and Pond Station Road. Due to the proximity of the existing railroad crossing across Stonestreet Road just north of Pond Station Road, the signal will need to be designed to provide railroad preemption upon notification of an approaching train.
3. Because of high volume to capacity ratios on Stonestreet Road with the installation of a traffic signal at Pond Station Road, local public agencies should consider the widening of Stonestreet Road in the near future to provide two travel lanes in each direction.

ANY MODIFICATIONS TO THE APPROVED EPSC PLAN MUST BE REVIEWED AND APPROVED BY METRO'S PRIVATE DEVELOPMENT REVIEW OFFICE. EPSC BMP'S BEST MANAGEMENT PRACTICES SHALL BE INSTALLED PER THE PLAN AND MS4 STANDARDS.
2. ACTIONS MUST BE TAKEN TO MINIMIZE THE TRACKING OF MUD AND SOIL FROM CONSTRUCTION AREAS ONTO PUBLIC ROADSWAYS. SOIL TRACKED ONTO THE ROADWAY SHALL BE REMOVED DAILY.
3. SOIL STOCKPILES SHALL BE LOCATED AWAY FROM THE STREAMS, PONDS, SWALES, AND CATCH BASINS. STOCKPILES SHALL BE SEED, MULCHED, AND ADEQUATELY CONTAINED THROUGHOUT THE USE OF BILT FENCE. ALL STREAM CROSSINGS MUST UTILIZE LOW-WATER CROSSING STRUCTURES PER MSD STANDARD DRAWING ER-2425.
4. SEDIMENT-LADEN GROUNDWATER ENCOUNTERED DURING TRENCHING, BORING OR OTHER ACTIVITIES SHALL BE PUMPED TO A SEDIMENT TRAPPING DEVICE PRIOR TO BEING DISCHARGED INTO A STREAM, POND, SWALE, OR CATCH BASIN.
5. WHERE CONSTRUCTION OR LAND DISTURBING ACTIVITY WILL OR HAS TEMPORARILY CEASED ON ANY PORTION OF A SITE, TEMPORARY SITE STABILIZATION MEASURES SHALL BE REQUIRED AS SOON AS PRACTICAL, BUT NO LATER THAN 14 DAYS AFTER THE ACTIVITY HAS CEASED.
6. MITIGATION MEASURES FOR DUST CONTROL, SHALL BE IN PLACE DURING CONSTRUCTION TO PREVENT FUGITIVE EMISSIONS REACHING EXISTING ROADS AND NEIGHBORHOODS.

WM# 8262
NOTE: UNDERGROUND UTILITIES ARE PLOTTED FROM A COMPILATION OF AVAILABLE RECORD INFORMATION AND SURFACE INDICATIONS OF UNDERGROUND STRUCTURES AND MAY NOT BE INCLUSIVE. PRECISE LOCATIONS AND THE EXISTENCE OR NON EXISTENCE OF UNDERGROUND UTILITIES CANNOT BE VERIFIED. PLEASE NOTIFY THE KENTUCKY UTILITY PROTECTION SERVICE AT 1-800-752-8007 BEFORE ANY PERIOD OF EXCAVATION OR CONSTRUCTION ACTIVITY.

DATE: APRIL 6, 2020
SCALE: 0 40 80 160
SHEET NAME: DEVELOPMENT PLAN
SHEET NO: C301

Proposed Copart Facility Expansion North of Pond Station Road

GENERAL NOTES:

- DOMESTIC WATER SUPPLY: SUBJECT SITE IS SERVED BY THE LOUISVILLE WATER COMPANY. ANY NECESSARY WATER SYSTEM IMPROVEMENTS REQUIRED TO SERVICE THE DEVELOPMENT SHALL BE AT THE OWNER/DEVELOPER'S EXPENSE.
- TREE PRESERVATION: A TREE PRESERVATION PLAN SHALL BE PROVIDED TO THE PLANNING COMMISSION'S STAFF LANDSCAPE ARCHITECT FOR APPROVAL PRIOR TO BEGINNING ANY CONSTRUCTION ACTIVITIES ON THE SITE.
- PROTECTION OF TREES TO BE PRESERVED: CONSTRUCTION FINISHING SHALL BE DIRECTED PRIOR TO ANY GRADING OR EROSION CONTROL MEASURES. PROTECTION OF ROOT SYSTEMS OF TREES TO BE PRESERVED: THE FENCING SHALL ENCLOSE THE AREA BENEATH THE DRIP LINE OF THE TREE CANOPY AND SHALL REMAIN IN PLACE UNTIL ALL CONSTRUCTION IS COMPLETE. NO PARKING, MATERIAL STORAGE, OR CONSTRUCTION ACTIVITIES SHALL BE PERMITTED WITHIN THE FENCED AREA.
- A LANDSCAPE AND TREE CANOPY PLAN PER CHAPTER 10 OF THE LDC SHALL BE PROVIDED AS REQUIRED PRIOR TO ISSUANCE OF BUILDING PERMIT.
- THE DEVELOPMENT LIES IN THE PLEASURE RIDGE FIRE DISTRICT.
- ALL LUMINAIRES SHALL BE AIMED, DIRECTED OR FOCUSED SUCH AS TO NOT CAUSE DIRECT LIGHT FROM THE LUMINAIRE TO BE DIRECTED TOWARDS RESIDENTIAL USES OR PROTECTED OPEN SPACES (E. CONSERVATION EASEMENTS, GREENWAYS OR PARKWAYS) ON ADJACENT OR NEARBY PARCELS, OR TO CREATE GLARE PERCEPTIBLE ON PUBLIC STREETS AND RIGHT-OF-WAYS PER CHAPTER 4.1.3 OF THE LDC.
- ALL DUMPSTER PADS, TRANSFORMERS, AC UNITS, GENERATOR PADS TO BE SITED PER CHAPTER 10 OF THE LDC.
- AS PREVIOUSLY APPROVED AN ALTERNATIVE LANDSCAPE PLAN IS PROPOSED AS ALIGNED BY 10.1.1.5 OF THE LDC THE EXISTING VEGETATION SHALL BE PRESERVED ALONG THE NORTH AND NORTHWEST PROPERTY LINE AS SHOWN ON THE PLAN AS AN ALTERNATIVE TO PROVIDING THE 6' BERM REQUIRED BY CHAPTER 10, PART 2. THE EXISTING VEGETATION WILL BE SUPPLEMENTED WITH PLANT MATERIAL AS REQUIRED.
- THE AREA ALONG POND CREEK IS DESIGNATED AS A PROPOSED GREENWAY PER CORNERSTONE 2020 CORE GRAPHIC 7. A 50' PEDESTRIAN EASEMENT SHALL BE PROVIDED AS REQUIRED BY LOUISVILLE METRO PARKS (DEPARTMENT).
- ALL STORAGE SHALL COMPLY WITH THE REQUIREMENTS OF CHAPTER 8 OF THE LDC. A SHARED BUSINESS SIGN IS EXISTING NEAR STONESTREET ROAD TO SERVE ALL THE INDUSTRIAL LOTS ON POND STATION ROAD. A DEVELOPMENT IDENTIFICATION SIGN FOR THIS LOT SHALL BE PROVIDED AT THE POND STATION ROAD ENTRANCE THAT SHALL HAVE A MAXIMUM OF 22' HEIGHT AND 100SF. AREA.

MSD NOTES:

- CONSTRUCTION PLANS & DOCUMENTS SHALL COMPLY WITH LOUISVILLE AND JEFFERSON COUNTY METROPOLITAN SEWER DISTRICT'S DESIGN MANUAL AND STANDARD SPECIFICATIONS.
- WASTEWATER: SANITARY SEWER WILL CONNECT TO THE DEREK R. OUTHRE WASTEWATER TREATMENT PLANT (17 EASTERN AVENUE), SUBJECT TO 1993 SANITARY SEWER CAPACITY TO BE APPROVED BY METROPOLITAN SEWER DISTRICT.
- DRAINAGE/STORMWATER RETENTION: INCREASED RUNOFF AND FLOODPLAIN DISPLACEMENT SHALL BE COMPENSATED AT 1.5:1 ON-SITE IN EXISTING BASIN. DRAINAGE PATTERN DEPICTED BY ARROWS (---) IS FOR CONCEPT PURPOSES ONLY. FINAL CONFIGURATION AND SIZE OF DRAINAGE PIPES AND CHANNELS SHALL BE DETERMINED DURING THE CONSTRUCTION PLAN DESIGN PROCESS. DRAINAGE FACILITIES SHALL CONFORM TO MSD REQUIREMENTS.
- AN EPSC PLAN SHALL BE DEVELOPED AND APPROVED IN ACCORDANCE WITH MSD DESIGN MANUAL & STANDARD SPECIFICATIONS PRIOR TO CONSTRUCTION PLAN APPROVAL.
- A PORTION OF THE SUBJECT PROPERTY LIES WITHIN A FLOOD HAZARD AREA PER FEMA'S FIRM MAPPING (211160 1065). NO SITE DISTURBANCE PROPOSED WITH THIS CONDITIONAL USE PERMITS REQUEST. THIS PROJECT WILL BE SUBJECT TO MSW WATER QUALITY REGULATIONS ONCE THE INCREMENTAL AREA OF DISTURBANCE SUMS EQUAL TO OF GREATER THAN 1 ACRE OF DISTURBANCE.
- KSOW APPROVAL REQUIRED FOR ANY WORK WITHIN THE FEMA FLOODPLAIN LIMITS.
- ANY REQUIRED FILL IN THE FLOODPLAIN SHALL BE COMPENSATED ON SITE AT A RATIO OF 1.5:1.

PUBLIC WORKS NOTES:

- COMPATIBLE UTILITY LINES (ELECTRIC, PHONE, CABLE) SHALL BE PLACED IN A COMMON TRENCH UNLESS OTHERWISE REQUIRED BY APPROPRIATE AGENCIES. THE DEVELOPER IS RESPONSIBLE FOR ANY UTILITY RELOCATION ON THE PROPERTY.
- SIDEWALK FEE-IN-LIEU WAS APPLIED WITH PREVIOUS DEVELOPMENT OF THE SITE CASE # 16667, FOR THE SIDEWALK REQUIREMENT ALONG STONESTREET ROAD.

BEARINGS & DISTANCES

1	N 29°20'20" E	202.40'	R=303.96'
2	N 13°20'00" E	96.40'	R=290.50'

11	N 35°13'01" W	97.13'	

LIGHTING NOTES:

- ALL LUMINAIRES SHALL BE AIMED, DIRECTED, OR FOCUSED SUCH AS TO NOT CAUSE DIRECT LIGHT FROM THE LUMINAIRES TO BE DIRECTED TOWARD RESIDENTIAL USES OR PROTECTED OPEN SPACES (E. CONSERVATION EASEMENTS, GREENWAYS, PARKWAYS) ON ADJACENT OR NEARBY PARCELS, OR TO CREATE GLARE PERCEPTIBLE TO PERSONS OPERATING MOTOR VEHICLES OR PUBLIC STREETS AND RIGHT-OF-WAY.
- WITHIN THE TRANSITION ZONE: ANY LUMINAIRES WITH A LAMP OR LAMPS RATED AT A TOTAL OF MORE THAN 1800 LUMENS AND ALL FLOOD OR SPOT LUMINAIRES WITH A LAMP OR LAMPS RATED AT A TOTAL OF MORE THAN 900 LUMENS SHALL BE MOUNTED AT A HEIGHT EQUAL TO OR LESS THAN THIRTY (30) FEET UNLESS OTHERWISE APPROVED BY THE PLANNING COMMISSION.
- WITHIN THE TRANSITION ZONE: LUMINAIRES THAT ARE MORE THAN 7,200 LUMENS SHALL BE FULLY-SHIELDED LUMINAIRES SO THAT THEY DO NOT SHED ANY DIRECT LIGHT ABOVE A HORIZONTAL PLANE THROUGH THE LOWEST DIRECT-LIGHT-EMITTING PART OF THE LUMINAIRE.
- THE LEVEL OF LIGHTING RESULTANT FROM LUMINAIRES INSTALLED ON A SUBJECT SITE SHALL NOT EXCEED ONE-HALF (0.5) FOOT-CANDELES AT ANY PROPERTY BORDER ADJOINING A LOW-TO-MEDIUM-DENSITY RESIDENTIALLY ZONED OR USED PROPERTY BORDER, AND 1.0 FOOT-CANDELES ON ANY HIGH-DENSITY RESIDENTIALLY ZONED OR USED PROPERTY BORDER, OR PUBLIC RIGHT OF WAY PARCEL OF LAND.

WAIVER APPROVED AT ORC NOVEMBER 8, 2008:

- A WAIVER IS APPROVED OF 5.8.2.A.1.1 OF THE LDC TO NOT PROVIDE A SIDEWALK FROM STONESTREET ROAD TO THE BUILDING ENTRANCE.
- A WAIVER IS APPROVED OF 10.2.4.8 TO ALLOW THE EXISTING 80' PRIVATE ACCESS AND UTILITY EASEMENT TO COMPLETELY OVERLAP THE 15' LANDSCAPE BUFFER AREA REQUIRED TO BUFFER THE PARKING FROM POND STATION ROAD.

SITE DATA:

EXISTING FORM DISTRICT	M-3
EXISTING ZONING	ABANDONED TRANSFER
EXISTING LAND USE	VEHICLE STORAGE
PROPOSED LAND USE	VEHICLE STORAGE
TOTAL VILLA	42,886 AC.
BUILDING AREA	5,200 ± S.F.
OFFICE	11,648 ± S.F.
WAREHOUSE	12,448 ± S.F.
FLOOR AREA RATIO (MAX. ALLOWED 4.0)	0.07
PARKING REQUIRED	MINIMUM (1 SPACE/200 S.F.) 26 SPACES
OFFICE	MAXIMUM (1 SPACE/200 S.F.) 25 SPACES
WAREHOUSE	NO ADDITIONAL EMPLOYEES
NO ADDITIONAL EMPLOYEES	NO ADDITIONAL PARKING REQUIRED
PARKING PROVIDED	91 SPACES
CAR PARKING	

SITE DISTURBANCE:

EXISTING IMPERVIOUS AREA	743,036 ± SF.
PROPOSED IMPERVIOUS AREA	743,036 ± SF.
TOTAL	

LANDSCAPE DATA:

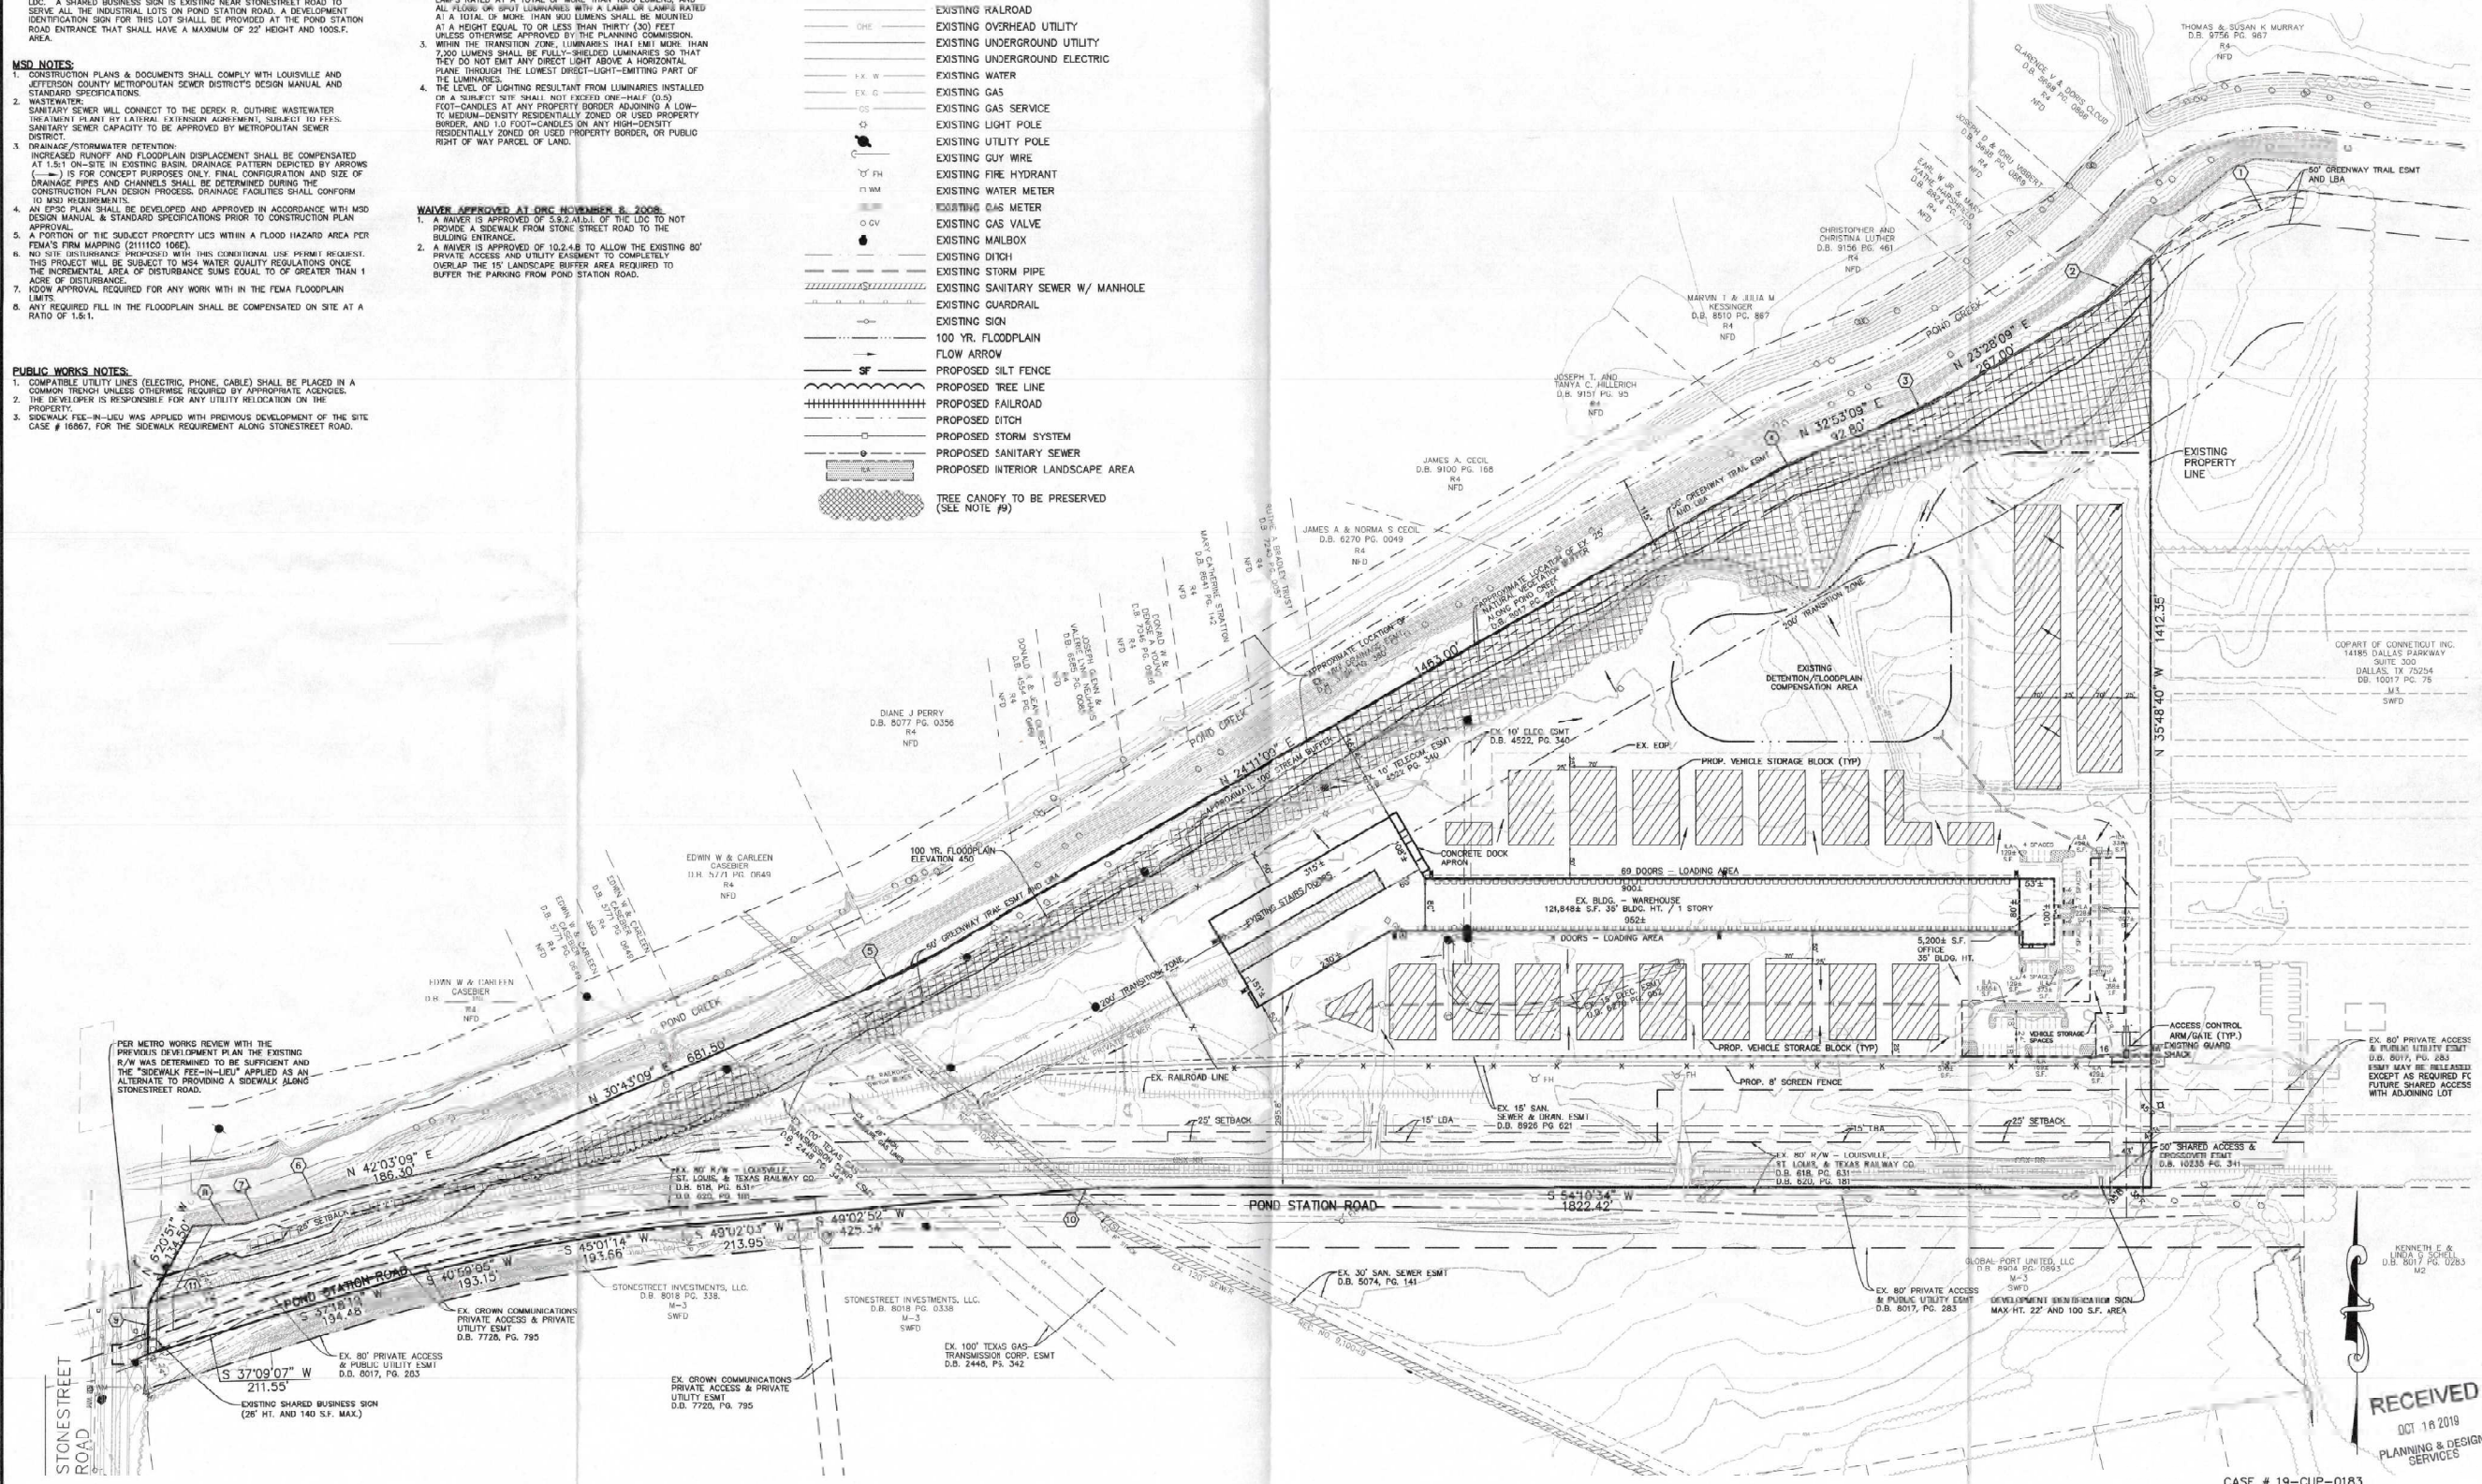

LOADING/MANUEVERING & STORAGE	019,800 ± S.F.
VEHICLE STORAGE	56,100 ± S.F.
TOTAL VILLA	58,904 ± S.F.

Definitions:

Sta. ID - Three digit county number + station number

MP - milepoint

Impact Year – year of significant change to traffic pattern within station segment

AADT – Annual Average Daily Traffic – the annualized average 24-hour volume of vehicles on a segment of roadway

% Single – single unit truck volume as a percentage of the AADT

% Combo – combination truck volume as a percentage of the AADT

K Factor – peak hour volume as a percentage of the AADT

D Factor – percentage of peak hour volume flowing in the peak direction

Trip Generation from the Copart facility in Palmdale, California

The trips for the existing and proposed Copart facility north of the Pond Station Road were estimated based on the counts from a similar Copart facility in Palmdale, California. A trip generation rate of 0.52 trips/ acre was used for AM peak and 0.57 trips/acre was used for the PM peak. The trip generation from the Copart facility in Palmdale, California are shown in the table below:

	Entering Trips	Exiting Trips	Total Trips
AM Peak	30	12	42
PM Peak	18	28	46
