

This is in response to 19-Waiver-0021.

I would like to ask some questions because John Maloney wants to build this structure next to my property. I am not necessarily opposing it, though obviously I would prefer it be built in space behind his house or his other neighbor at 9202.

What are the exterior construction materials of the building? Will there be windows? What will be the height of the building? What will be the height of the roof? (over 15 feet tall?)

Where is the vehicular access to the building?

What other driveway plans are there?

Last summer John Maloney and Raymond Madras told me they planned to adjust their property lines to extend the length and shorten the width of the Madras property to accommodate a driveway behind the Maloney block garage and red shed (not shown on map) to go in front of the new structure and entrance and go beyond toward the Susan and David Fink property and circle around behind the new structure to provide parking for additional cars.

Is the property adjustment still being considered?

Is the extended driveway and parking behind the structure still being considered?
