Re: West Louisville Food Port  
Seed Capital KY, Inc. Anaerobic Digester Facility  
Case No. 15DEVPLAN1108  
and  
CUP Application  
Case No. 15CUP1023

Planning Commission and Board of Zoning Adjustment Members,

The proposed West Louisville Food Fort, to be located at 3029 West Muhammad Ali Blvd, is proposing to include a bio-digester plant and methane production facility within the Food Port development. The Category 3 Plan Application, Variance Application, and General Waiver Applications, dated July 13, 2015, Case No. 15DEVPLAN1008, include request for approvals related to the Anaerobic Digester site. As well, a Conditional Use Permit (CUP), Case No. 15CUP1023, is pending for a second Anaerobic Digester facility to be located at 821 A. 17<sup>th</sup> Street.

This letter is our formal request, to this Planning Commission and Board of Zoning Adjustments members, to deny all approval requests for the Bio-digester sites, methane plant facilities and other related structures proposed in West Louisville. As well, deny any approvals for variances, waivers and Conditional Use Permits submitted by Seed Capital KY, and/or Nature's Methane, related to the construction of the facilities that will be used to receive food waste or produce any type of gas product.

The redevelopment of West Louisville is extremely important to the city of Louisville. The risks and consequences these projects could present for West Louisville and its residents are enormous. Methane gas production, in a highly populated/dense residential area, is unhealthy, dangerous and it brings with it many other environmental and health hazards. I urge everyone to research the risks, effects and negative conditions that a single methane gas facility in West Louisville could create. The waste required for methane production will be transported through the streets and neighborhoods of West Louisville and thereby creating even more health and environmental issues.

15cup1023

There are many discussions taking place around the world regarding the dangers and risks of Methane Gas and negative effects that Methane Gas creates. Methane is highly explosive and it can cause death by asphyxiation. Scientific research has revealed that methane can form an EXPLOSIVE mixture in air at levels as low as five (5) percent.

Reverend Louis Coleman and many other groups have worked tirelessly to protect West Louisville and its environment. In fact, the residue left from chemical plants and other bad environmental conditions of the past is still affecting West Louisville residents.

The attached report from the Kentucky Center for Health, Environment and Justice ([chej.org](http://chej.org)) lists several actions that describe the past and ongoing fight to remediate the ill effects caused by chemicals, contaminations and unhealthy environmental conditions in West Louisville, as is evidenced by the presence of the anaerobic digester at the Morris Forman Waste Water Plant and other Kentucky counties.

Let us think seriously about planned redevelopment of vacant, abandoned and under-utilized properties in West Louisville. Redevelopment should enhance the community versus degrade the community. West Louisville deserves better planning and development!

Sincerely,

Reverend Claude Royston  
106 Northwestern Parkway  
Louisville KY 40212
