Jay,

We did not receive notification mailed to our address on this project waiver. Also, the layout shows it as a **proposed** parking in the landscape buffer. This has been **completed prior to approval.** so the documents are inaccurate, saying it is proposed by Luckett and Farley,

This encroachment and excessive pavement has caused rainfall water from the drainage easement to overflow onto our property at 11801 Diode Court in rain events.

The drainage easement is full of debris, excess silt and needs to be excavated and have the berm build up substantially adjacent to our property, at the rear of the property requesting a waiver.

We are opposed to this waiver with these issues. Planning and Design allowed the adjacent neighbor to move the drain easement from the center of the property at 2802 Diode Lane to our property line without any input.
