What changes, if any, would you like to see in the proposed anaerobic digester regulations?

~~NOISE~~  
OUT OF PATH OF AIR PLANE SKY TRAVEL  
WHAT TYPE OF EVACUATION PLAN IS PUT IN PLACE?

NOISE  
ORBIT  
DANGERS  
1/2 MILE NOT ENOUGH DISTANCE FROM RESIDENT  
SCHOOL, CHURCH - 150 MILES FROM HABITATION  
BIG STAR "FIRST TRY"  
WHY DID MAYOR FIGHT BILL 449

IS IT NOT TRUE THE OFFICE OF PLANNING AND  
DESIGN COULD NOT IDENTIFY SIMILAR URBAN  
AREAS TO LOUISVILLE THAT HAD REGULATIONS  
FOR PLACEMENT OF METHANE PLANTS IN THEIR  
URBAN CORE  
- WE DON'T WANT IT

• re: agricultural preps - the products used in the digester should be produced on the agricultural property (i.e. urban ag sites)

• there should be a size limit and regulations should be specific to size. No "one size fits all" regulations

• what's the plan if the digester explodes?  
- ~~the~~ the regulations should mandate <sup>a</sup> ~~the~~ community evacuation plan  
- the regulations should mandate some assessment of "what if it explodes"

Is the working draft simply a restatement of the Neighborhood Agreement that Star Energy's attorney presented at the Board of Zoning Adjustments (BOZA) earlier? We are referring to sections 4.2.63B through J.

In the last Ky legislative session, HB 449 was introduced to set up a permitting process for methane plants in urban areas. Why did the Mayor's office fight against such a beneficial piece of legislation?

How will the provisions  
of 4.2.63 B, C, E, G, H I & J be  
enforced?

Will it be the neighborhood's  
obligation to monitor the  
enforcements as the Buthertown  
neighborhood has had to do against  
all the orders when the city failed  
to do anything about the emissions?

Ban the EZ-1 for methane plant in  
all communities.

Agricultural regulations need  
to be redrafted stating that  
it is not exempt from zoning  
requirements. That Agricultural  
need to be used only in Agricultural  
zones and not ~~residential~~ residential  
use.

In proposed Section 4.2.63A the methane plant is to be positioned 1320 feet from residential use. How was that distance established?

Would a distance from residential use of between 2640 and 5280 feet (i.e., 1/2 to 1 mile) be more appropriate?
