

Changes to Conservation Subdivision Draft After Planning Commission Hearing on 7/7/16

Page	Change	Comment
7.11-2	<p><u>Undeveloped (Conservation Subdivisions)</u> – A characteristic of a site whereby the site does not contain or exhibit any of the following improvements, activities or characteristics, except as customarily associated with cemeteries, farmlands, recreational activities, floodplain compensation, creation of water features, provision of underground utilities, provision of detention basins, or historic, cultural or archeological sites: <u>buildings; mining, dredging, filling, excavating, drilling or grading activities; paving; or storage of materials and equipment; and any construction of improvements or clearing or the alteration of land from a natural state to facilitate a residential, commercial, business, or industrial use.</u></p>	Address concerns about allowing certain activities to not be considered “developed”.
7.11-4	<p><u>D. Tree Removal Prior to Application.</u> A site shall be ineligible for development as a conservation subdivision if any tree removal has taken place on the site at any time within twelve months prior to pre-application submittal without consultation and approval of the Urban Forester. In addition, no such tree removal shall take place in the time between pre-application submittal and final approval of the conservation subdivision. This requirement shall not prohibit tree removal for safety reasons, routine maintenance, or required geotechnical work.</p>	Address concern about inadvertently prohibiting required geotechnical work prior to development.
7.11-6	<p><u>2. Tree Removal Affidavit.</u> The applicant shall submit an affidavit affirming that no tree removal, other than removal for safety reasons, routine maintenance or required geotechnical work and after consultation with and approval of the Urban Forester, has taken place on the site at any time within twelve months prior to pre-application submittal and that no such tree removal will take place on the site during the review process compliance with Section 7.11.3.D.</p>	Shortened the sentence to refer back to 7.11.3.D
7.11-7	<p>8. Utilities and Easements.</p> <ul style="list-style-type: none"> a. Approximate locations of existing utility easements and approximate locations of proposed utility easements. b. Approximate layout of all proposed sanitary and storm sewers and location of all inlets and culverts, and any proposed connections with existing facilities. (These data may be on a separate plan.) c. The tentative location of proposed on-site sewage and water facilities. <u>d. The tentative location of all Green Management Practices.</u> 	Requested by MSD.

7.11-8	<p>7.11.5 Development Design Standards</p> <p>In addition to the Technical Standards for Conservation Subdivisions as set forth in Section 7.11.9, the following criteria shall be followed by applicants and considered by review bodies to ensure that the project is appropriate for the site’s natural, historic and cultural features and meets the objectives of this regulation Part:</p> <p>A. Lots and buildings must be clustered to minimize negative impacts on the natural, scenic, and cultural resources of the site and conflicts between incompatible uses.</p> <p>B. Open space shall abut with existing or potential open space lands on adjoining parcels and local or regional recreational trails. Written justification is required for open space that does not abut adjacent open space.</p> <p>C. The design of the subdivision is in accord with the Purpose of this Part, as established in Section 7.11.3.</p>	Removed based on concerns about being too discretionary.
7.11-10	<p><u>B. Full Credit Conservation Areas</u></p> <p>....</p> <p><u>f. Any intermittent stream or river (or portion thereof), with a minimum 50-foot Buffer Area, that is portrayed as a broken line on the United States Geological Survey 7.5 minute quadrangle maps, of the most recent edition.</u></p>	Added at request of Commissioners and residential stakeholders.
7.11-11	<p>3. Except for civic and recreational spaces, such as squares and playing fields, Conservation Areas shall be free of all structures, excluding, however, historic buildings, stone walls, and structures related to Conservation Area land uses. Structures and improvements made for storm drainage, sewage treatment, and water supply may be located in the Conservation Area land. Acreage set aside for such uses sewage treatment and water supply shall not be credited towards the minimum required Conservation Area. Thirty percent of the acreage set aside for storm drainage that does not qualify as a Green Management Practice shall be eligible for credit as Conservation Area. One hundred percent of the acreage set aside for (a) storm drainage that does qualify as a Green Management Practice or (b) underground utilities shall be eligible for credit as Conservation Area if unless the land remains appropriate for passive recreational use.</p>	Added based on MSD meeting. We did not want to penalize a project in terms of open space credit that had green wet or dry basins. Also added based on concern that underground utilities should get full credit if appropriate for recreation.
