

Mental Health Issues Cannot Be Fixed /With A Band-Aid

Wanda Trimble Concern for others

Band-Aid Fix is not enough time to help mental issues /3-7 days in hospital does not work

All mental patients need help from doctors not intake

No one should be left alone to deal with mental issues

Doctors need to be more on board/present when assessments are taken from mental patients for observations/ patients needs to be present when information is presented to doctor by a third party

Always think of the safety issues for patient and others
Are you going to hurt yourself or others?

What day is this?

What year is this? Questions like this does not help patient to get the help they need

In take assessments need a lot of work to be helpful for mental patients

Don't put lives in jeopardy because of a system that allows mental patients to fall through the cracks of a system in need of repair because something really needs to be done to help mental patients between ages of 18-24 years old. It is hard to turn eighteen and not have survival skills. My dear Metro Council friends please help to find a solution.
