

Introduction To Scenario Planning & Envision Tomorrow

By: John Fregonese & Alex Steinberger

Fregonese Associates,

a land use planning firm in Portland, OR

SCENARIO PLANNING Worldwide, communities and regions have a long history of planning to make and keep great places for people to live. Scenario planning is a unique methodology for any community to better prepare for its future. It offers powerful analytical tools to estimate how well existing or potential plans and strategies will do in meeting important local and regional needs given different assumptions about the future. Scenario planning also provides a way to evaluate how well communities are prepared to deal with new issues and changing circumstances such as rising energy costs and changing demographics.

ENVISION TOMORROW puts powerful tools in planners' hands to design and test land use and transportation decisions. The Envision Tomorrow GIS-based software package can help your city or region examine possibilities at a range of scales. Whether considering how to maximize growth around transit or identify development and redevelopment priorities, Envision Tomorrow provides planners with an easy-to-use, analytical decision making tool.
