3-Year Paving Program FY 19 Update

Overview

The 3-Year Paving Program specifies the Louisville Metro maintained roadways that are scheduled to be paved over the next 3 fiscal years, beginning July 1, 2018, assuming a consistent level of funding for the duration of the plan, and the anticipated changes in the average Pavement Condition Index (PCI) as a result. Included with this program is Public Works' Pavement Management Plan that is designed to proactively maintain the condition of the public roads and prolong service life by performing short-term repairs and street maintenance techniques that are more cost effective than full reconstruction.

In accordance with Ordinance 115, Series 2017, this updated plan uses a minimum of 60% for paving and pavement rehab on local classified roads in FY 19.

For planning purposes, Public Works is proposing a FY 19 paving budget of \$18,200,000. With the renegotiated paving contract awarded in December of 2017, which resulted in a savings of about 9%, Public Works will still be able to pave the same quantity of roads as in FY 18 but at a reduced budget. For fiscal years 2020 and 2021, an overall paving budget of \$20,000,000 per year was assumed. The three tables below show the proposed funding by fiscal year for each road classification/

FY 19 Proposed Paving Budget

Total Budget	\$18,200,000	% of budget
Arterial	\$3,810,317	20.9%
Collector	\$2,752,760	15.1%
Local	\$10,883,152	59.8%
Rehab	\$253,771	1.4%
Utility Restoration	\$500,000	2.7%
Ord 115, 60% for local & rehab	61%	

FY 20 Proposed Paving Budget

Total Budget	\$20,000,000	% of budget
Arterial	\$6,478,726	35.6%
Collector	\$6,431,776	35.3%
Local	\$6,326,340	34.8%
Rehab	\$350,000	1.9%
Utility Restoration	\$413,158	2.3%

FY 21 Proposed Paving Budget

Total Budget	\$20,000,000	% of budget
Arterial	\$6,097,262	30.5%
Collector	\$6,256,889	31.3%
Local	\$6,474,545	32.4%
Rehab	\$500,000	2.5%
Utility Restoration	\$671,304	3.4%

Proposed spending for paving by District for FY 19:

LANE MILES TO BE PAVED BY DISTRICT PER FISCAL YEAR

Each road is assigned a Pavement Condition Index (PCI) between 0 & 100 depending on the number and type of distresses across the roadway segment. This method, developed by the United States Army Corps of Engineers and standardized by ASTM D6433-11, subjectively indicates the condition of the roadway and is a valuable tool in the planning of future maintenance needs. Table 1 below describes the conditions typical within each of the PCI ranges:

Table 1: PCI descriptions

Condition	Description
Very Good-Excellent (PCI = 86-100)	Newly constructed for resurfaced pavement with few signs of distress.
Good (PCI = 71-85)	Pavement requiring mostly preventive maintenance and showing only low levels of distress.
Fair (PCI = 56-70)	Pavement at the low end of this range is significantly distressed and may require a combination of rehabilitation and preventive maintenance.
Poor (PCI = 41-55)	Deteriorated pavement requiring immediate attention, including rehabilitative work.
Very Poor (PCI = 40-0)	Pavement showing extensive distress and requiring major rehabilitation or reconstruction.

Purpose

This program was developed to prioritize road paving projects over the next 3 years and demonstrate the affect the projects will have on the overall PCI throughout Metro and the funding necessary to meet the goals established by Public Works that will ensure acceptable pavement conditions for citizens traveling the roadways.

Projects were prioritized based on road classification and predicated PCI with the goal of achieving an average PCI greater than 55 on 80% of the arterial and collector roads with fewer than 2% having a PCI less than 40 PCI over the next 3 years. The goal on the local roads is to have at least 72% with an average PCI greater than 55 and no more than 10% with a PCI less than 40 over the next 10 years. Concentrating on the arterial and collector roads in the immediate future will offer the highest benefit to the traveling public since these roads carry the highest volumes of traffic. Maintaining these roads above a 55 PCI through a combination of rehabilitation and preventative maintenance will also prolong the life

of the road and reduce maintenance costs by catching distresses before the roadway has failed and requires a full reconstruction.

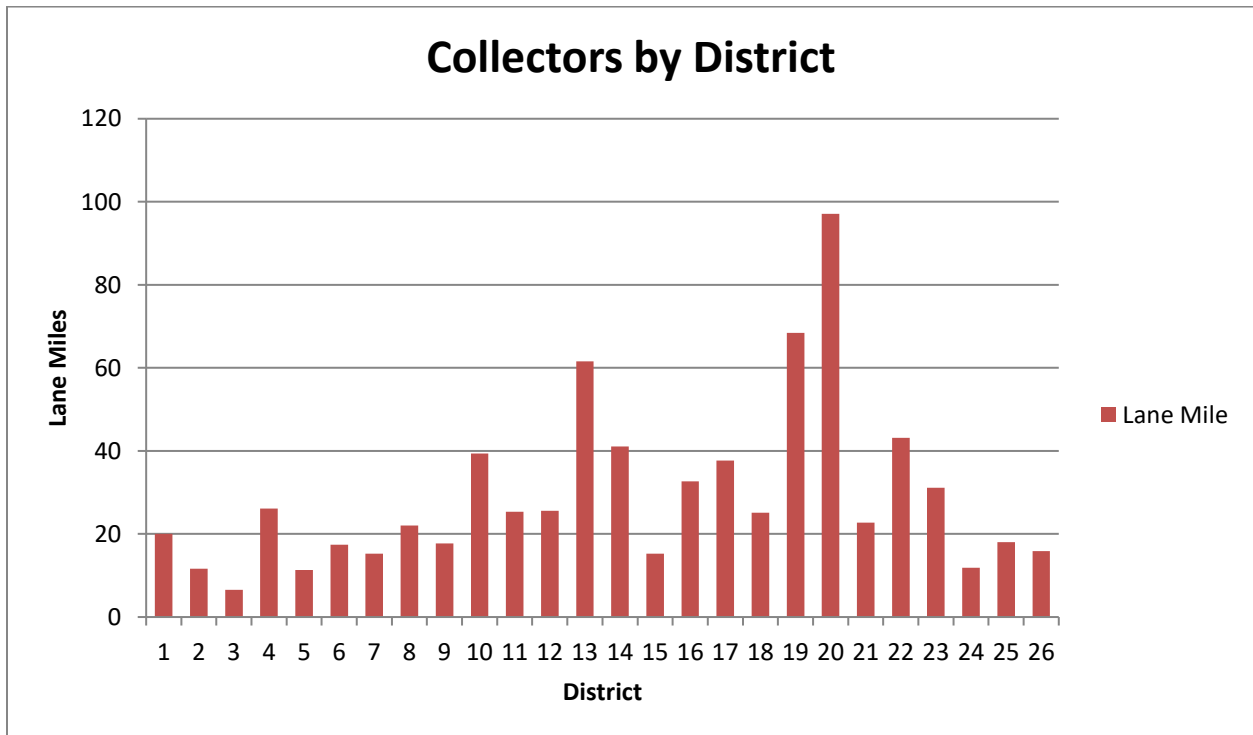

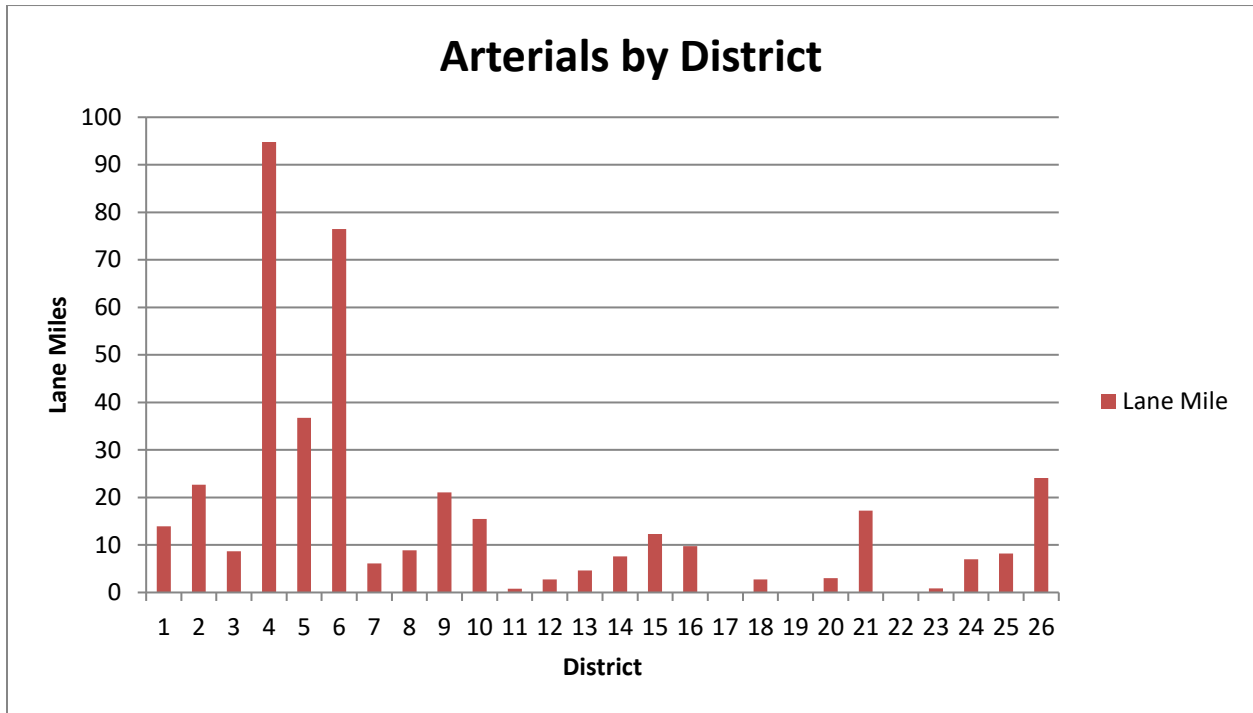

Assets

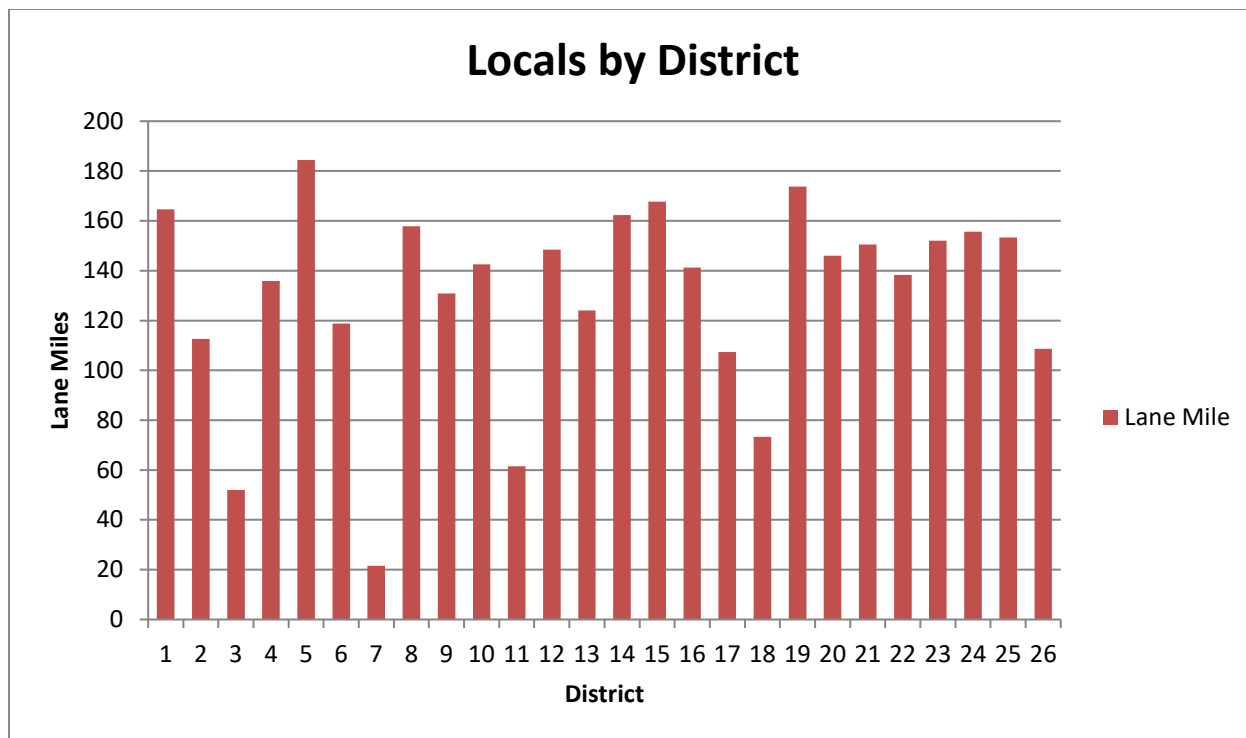

Public Works is responsible for maintaining over 2,181 centerline miles of roadway, which equates to about 4,546 actual lane miles. Centerline miles are simply a measurement of length from point to point and do not take into account the number of lanes or direction of traffic. Lane miles are a measurement of traversable roadway which must be paved or plowed and assumes an average lane width of 11.7 ft. Each road is given a classification based on volume of traffic, density of development, abutting uses and overall connectivity. Table 2 shows Public Works' current roadway inventory:

Classification	Centerline Miles	Lane Miles
Arterial	129	428
Collector	356	743
Local	1,696	3,392
TOTAL	2,181	4,563

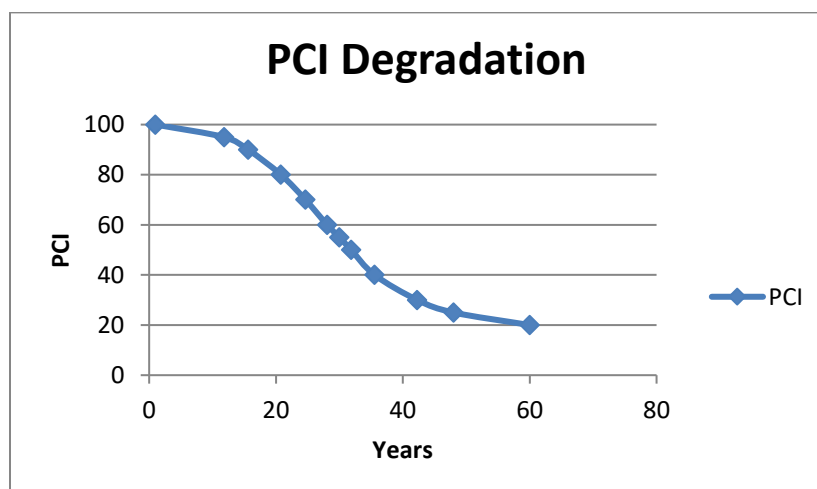

Table 2: Roadway inventory by classification

The 3 graphs below show the number of lane miles of each roadway classification within each Council District. Each road segment can only be associated with one district; however, the actual road may serve as the border between two districts.

To date, Public Works has conducted two surveys of the roadways with the purpose of determining the PCI for all of the Metro maintained roads. The first survey, completed in 2013, established a PCI value for all classifications of roads. The second survey, completed in late 2015, included only the arterial and collector classified roadways. Using the 2013 values for the local roads and the 2013 & 2015 values for the arterial and collector roads, a predicted PCI was calculated for each fiscal year of the program based on a standard rate of degradation for each classification. As surveys are conducted in the future, a better developed rate of degradation will be established that can more accurately calculate the predicted PCI expected for all roads based on classification, age of the pavement and maintenance applied. Public Works intends to conduct these surveys on a routine basis with all arterial and collector roads measured every 3 years and local classified roads measured every 6 years. The graph below shows a typical rate of degradation to be expected over the life-cycle of a roadway:

All PCI's reported in the attached appendices with the proposed paving is the actual measured PCI obtained in the earlier surveys and not the predicted PCI. Since the predicted PCI's are based on assumptions in the rate of degradation, and applied uniformly by age of pavement, the difference between the actual measured PCI and predicted PCI did not affect which roads were identified as priorities in each fiscal year. The predicted PCI was used to demonstrate how future year paving, given a specific funding amount, influenced the overall PCI each year. Tables 3, 4 & 5 below show the changes to the average PCI for arterial and collector classified roads based on the funding amounts identified and implementation of the pavement preservation schedule.

The paving priorities and predicted PCI are all based on an assumed life-cycle for each classification of road and implementation of a pavement preservation schedule. For arterial classified roads, a typical life-cycle consists of a complete milling and resurfacing every 17 to 22 years and crack sealing within 4 to 6 years of the resurfacing. Collector classified roads are expected to be milled and resurfaced every 22 to 27 years with crack sealing within the first 5 to 8 years of the life-cycle. Local roads are expected to have a 40 to 45 year life-cycle between resurfacings with crack sealing in the first 8 to 12 years. In addition to crack sealing on the local roads, micro-surfacing, which is a thin layer of asphalt to rejuvenate the wear layer, will be applied to select local classified roads to extend the pavement life. All classifications of roads will be annually inspected for pothole patching, small scale full-depth repairs and crack sealing.

See Appendix A, B, & C for the road segments scheduled to be paved during the 3-Year Paving Program.
