## INTRODUCTION

The development plan for Topgolf at Oxmoor Center (Mall), 7900 Shelbyville Road, in Louisville, KY shows an entertainment golf venue with 102 hitting bays. **Figure 1** displays a map of the site. The facility will face Oxmoor Lane and is the site of the former Sears store. The Sears store and a section of the center will be demolished. Access to the Topgolf site will be from Oxmoor Lane and Christian Way. The purpose of this study is to examine the traffic impacts of the development upon the adjacent street system. For this study, the impact area was defined to be the intersections along Shelbyville Road of New La Grange Road, Oxmoor Lane, Christian Way, Toyota, and Lyndon Lane; and the intersections along Oxmoor Lane with Oxmoor Ford/Oxmoor Center, Bullitt Lane, and the Sears access road; and the intersections of Christian Way with the Sears access road, and Lyndon Lane.

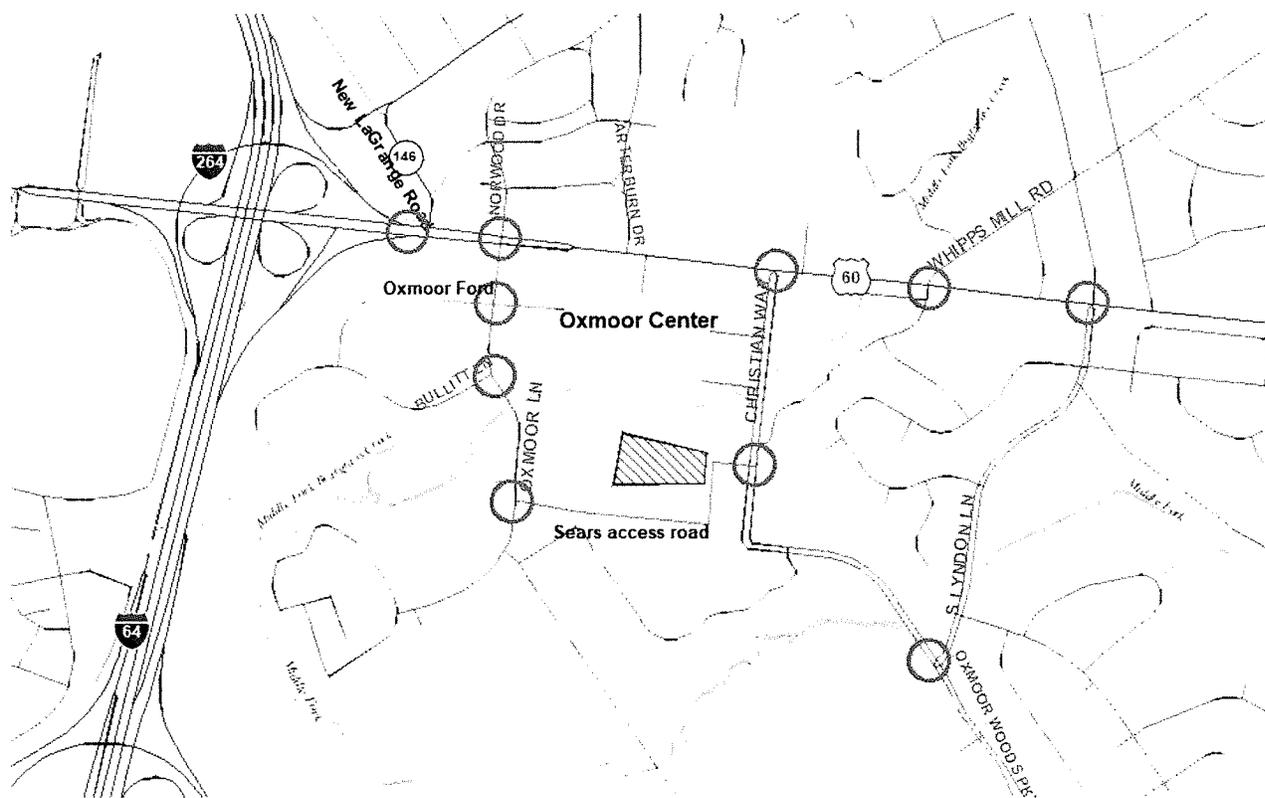

Figure 1. Site Map

## EXISTING CONDITIONS

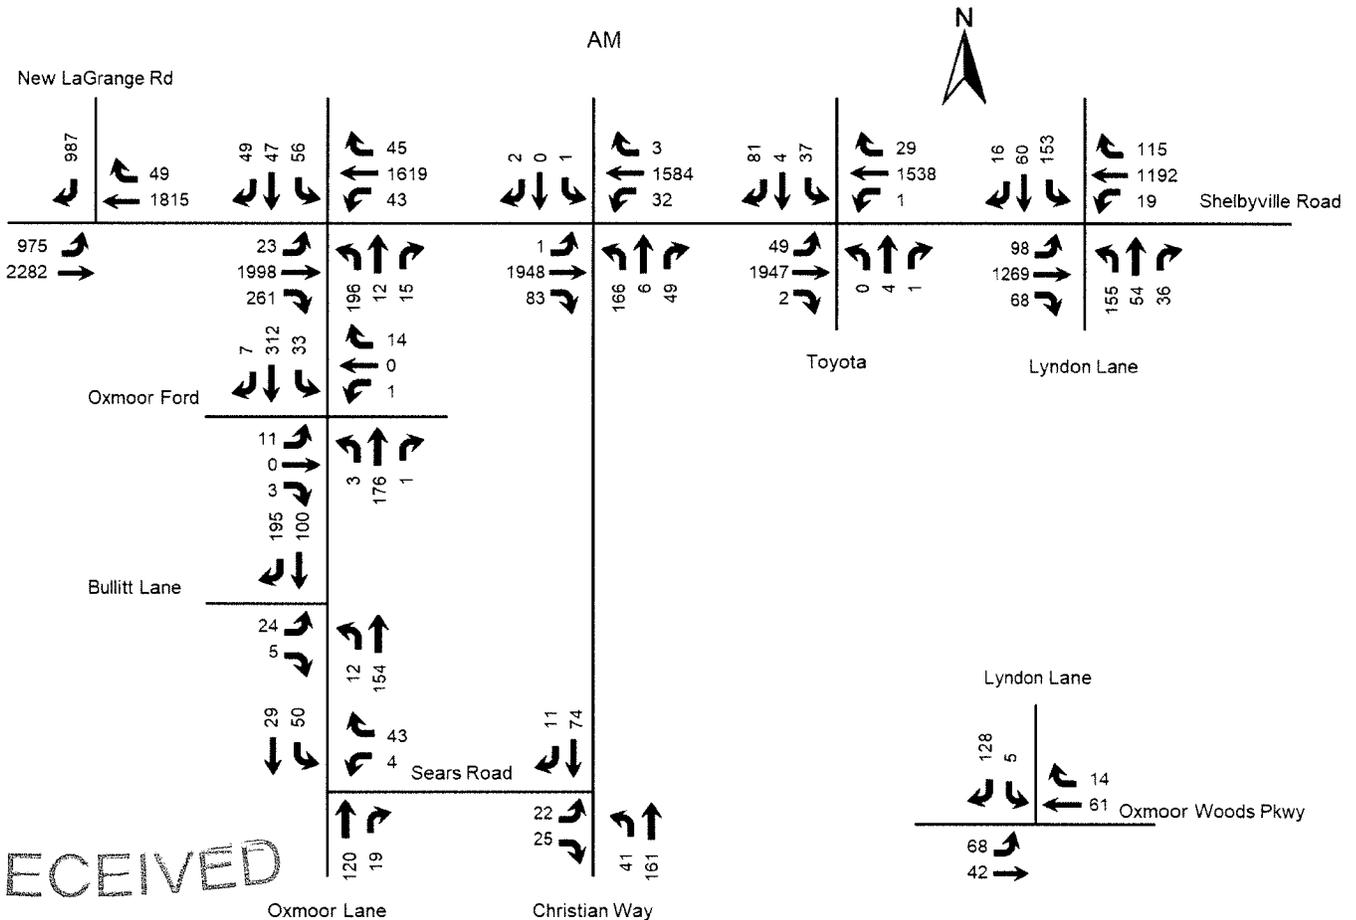

Shelbyville Road is maintained by the Kentucky Transportation Cabinet (US 60) with an estimated 2018 Average Annual Daily Traffic (AADT) of 63,800 vehicles per day between the New La Grange Road and Oxmoor Lane, as estimated from counts made for this study. The road is a six-lane highway with twelve-foot lanes. The road narrows to four lanes at approximately Arterburn Drive. The speed limit is 45 mph. There are no sidewalks. The intersections with New La Grange Road, Oxmoor Lane, Christian Way, Toyota, and Lyndon Lane are controlled with a traffic signal. There is TARC service along Shelbyville Road and through the center.

Topgolf  
 7900 Shelbyville Road  
 Traffic Impact Study

Oxmoor Lane is maintained by Louisville Metro. The road has four lanes with a thirty-two-foot median with an estimated 2018 AADT of 17,000 vehicles per day. There is a sidewalk on both sides except near Beargrass Creek. The speed limit is 25 mph. The intersection with Bullitt Lane is controlled with a stop sign on Bullitt Lane. There is a traffic signal at the entrance to the mall/car dealership.

Christian Way is maintained by Louisville Metro. The road has four lanes with a twenty-two-foot median with an estimated 2018 AADT of 8,500 vehicles per day. There is a sidewalk on the east side between Shelbyville Road and Christian Court. The speed limit is 25 mph. The intersection with Lyndon Lane and Oxmoor Woods Parkway is controlled as an all-way stop.

Peak hour traffic counts for the intersections adjacent to Oxmoor Center were obtained on May 17, 2018. The peak hours selected for analysis are 7:30 to 8:30 a.m. and 5:00 to 6:00 p.m. **Figure 2** illustrate the 2018 a.m. and p.m. peak hour traffic volumes. The other Shelbyville Road intersections were factored to match the new counts.

### FUTURE CONDITIONS

The estimated project completion date is 2020. The traffic study for proposed apartments at 202 Oxmoor Lane (prepared by Diane B. Zimmerman Traffic Engineering, LLC dated November 8, 2017) determined the annual growth rate for the area to be 0.5%. The same annual growth rate is used for this study. Additionally, trip generation for the 110-room hotel currently under construction on Bullitt Lane was also included. The Oxmoor Farm will be developed in stages and each stage will be required to submit a traffic study reflecting the current traffic and the development proposed. Therefore, additional traffic from the Oxmoor Farm has not been included. The No Build volumes are shown in Figure 3.

## TRIP GENERATION

The Institute of Transportation Engineers Trip Generation Manual, 10<sup>th</sup> Edition contains trip generation rates for a wide range of land uses, however the golf entertainment site land use was not included. Therefore, trip generation data was collected at a similar Topgolf site in Scottsdale, Arizona. The trip generation results are listed in **Table 1**. The new trips were assigned to the highway network with the percentages shown in **Figure 4**. **Figure 5** shows the trips generated by this development and distributed throughout the road network during the peak hours. **Figure 6** displays the individual turning movements for the peak hours when the development is completed.

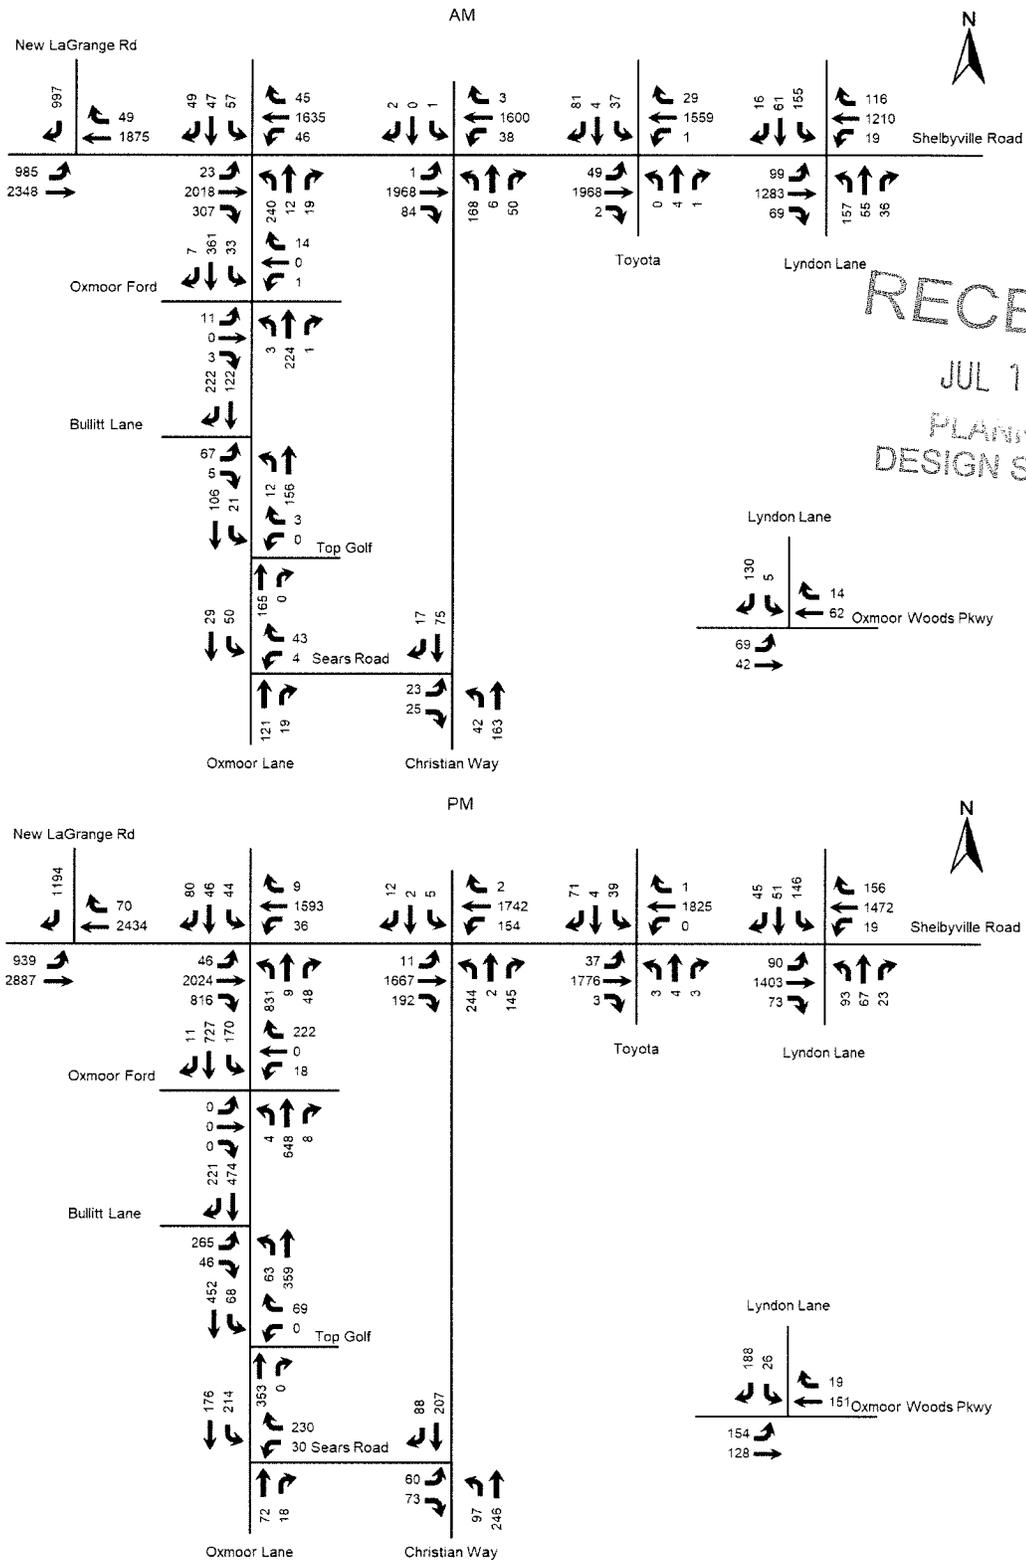

Figure 6. 2020 Build Peak Hour Volumes

Comparing trip generation for a fully occupied shopping center with the trip generation associated with the revised center and a Topgolf site is an additional measure to evaluate the impact of the proposed development. The current Gross Leasable Area (GLA) of Oxmoor Center is 930,334 square feet. The proposed changes will total 783,003 square feet, plus the Topgolf site. The Topgolf site is not included in the GLA of the new center for this comparison. The proposed plan will generate 4.4 percent less traffic on a typical day. **Table 2** summarizes this comparison.

**Table 2. Trips Generation Comparison**

	A.M. Peak Hour	P.M. Peak Hour	Daily
Shopping Center GLA 930,334 sf	617	2,831	27,396
Proposed Center GLA 783,003 sf + Topgolf 102 bays	575	2,675	26,202
Percent change	-6.8%	-5.5%	-4.4%

## ANALYSIS

The qualitative measure of operation for a roadway facility or intersection is evaluated by assigning a “Level of Service”. Level of Service is a ranking scale from A through F, “A” is the best operating condition and “F” is the worst. Level of Service results depend upon the facility that is analyzed. In this case, the Level of Service is based upon the total delay experienced at an intersection.

To evaluate the impact of the proposed development, the vehicle delays at the intersections were determined using procedures detailed in the Highway Capacity Manual. Future Level of Service and seconds of delay were determined for the intersections using the Synchro (version 10) software. The Level of Service and seconds of delay are summarized in **Table 3**.

Key: Level of Service, Delay in seconds per vehicle

## CONCLUSIONS

Based upon the volume of traffic generated by the proposed development and the amount of traffic forecasted for the year 2020, there will be a manageable impact to the existing highway network, with Levels of Service remaining within acceptable limits. The delays experienced in the area will increase within acceptable limits, thus no improvements to the roadway system are recommended.
