

Project Description cont.

All units have front and side windows to create a harmonious appearance with both the residential and commercial structures in the neighborhood. This will ensure the project engages with the neighborhood and does not look like a metal compound. The border of the property will consist of a limestone landscape curb and ornamental metal fence to complement the adjacent properties. Inside the ornamental fencing will be additional landscaped plantings to further soften the metal look of the shipping containers. It is also planned for the structures to have green/living roofs to limit environmental impacts and enhance the environmentally friendly goal of the project.
