INTRODUCTION

The development plan for three lots on the northeast corner of Preston Highway and Interchange Drive in Louisville, KY shows a gas station with convenience store and two fast-food restaurants. **Figure 1** displays a map of the site. Access to the development will be from Interchange Drive, and a right-in/right-out on Preston Highway. The purpose of this study is to examine the traffic impacts of the development upon the adjacent highway system. For this study the impact area was defined to be the intersections of Preston Highway with Interchange Drive, and Cooper Chapel Road, and Mt. Washington Road.

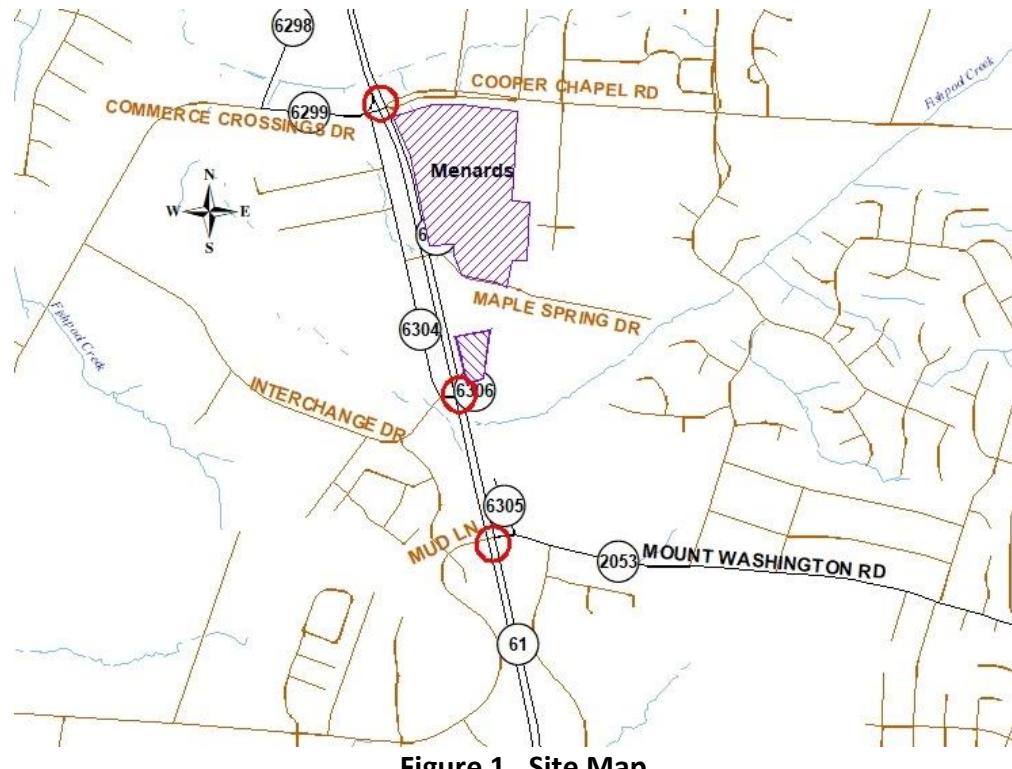

Figure 1. Site Map

EXISTING CONDITIONS

Preston Highway (KY 61) is maintained by the Kentucky Transportation Cabinet (KYTC) with an estimated 2021 ADT of 34,600 vehicles per day south of Cooper Chapel Road, as estimated from the turning movement count using a K factor of 9.90. The road is a four-lane road with twelve-foot lanes with ten-foot paved shoulders. Northbound widens to three lanes north of Maple Springs Drive to the interchange with I 265. The southbound third lane drops 300 feet south of the intersection at Commerce Crossings Drive. The posted speed limit is 50 mph. There are no sidewalks. The intersections with Commerce Crossing Drive, Interchange Drive, and Mt. Washington Road are controlled with a traffic signal. At the intersection with Cooper Chapel Road, there are dual left turn lanes on each approach, except northbound. There is a right turn lane eastbound and southbound; and dual right turn lanes on westbound Cooper Chapel Road. At the intersection with Interchange Drive there are left turn lanes on all approaches and right turn lanes on the southbound and eastbound approaches. At the intersection with Mt. Washington Road there are left and right turn lanes on all approaches, except westbound Mt. Washington Road. Mt. Washington Road has a shared left/thru lane. Preston Highway is served by TARC.

Preston Highway at Interchange Drive
Traffic Impact Study

Peak hour traffic counts for the intersections were obtained on Tuesday, April 13, 2021 (see Appendix A). The a.m. peak hour occurred between 7:15 and 8:15 and the p.m. peak hour varied between the intersections. **Figure 2** illustrates the existing a.m. and p.m. peak hour traffic volumes.

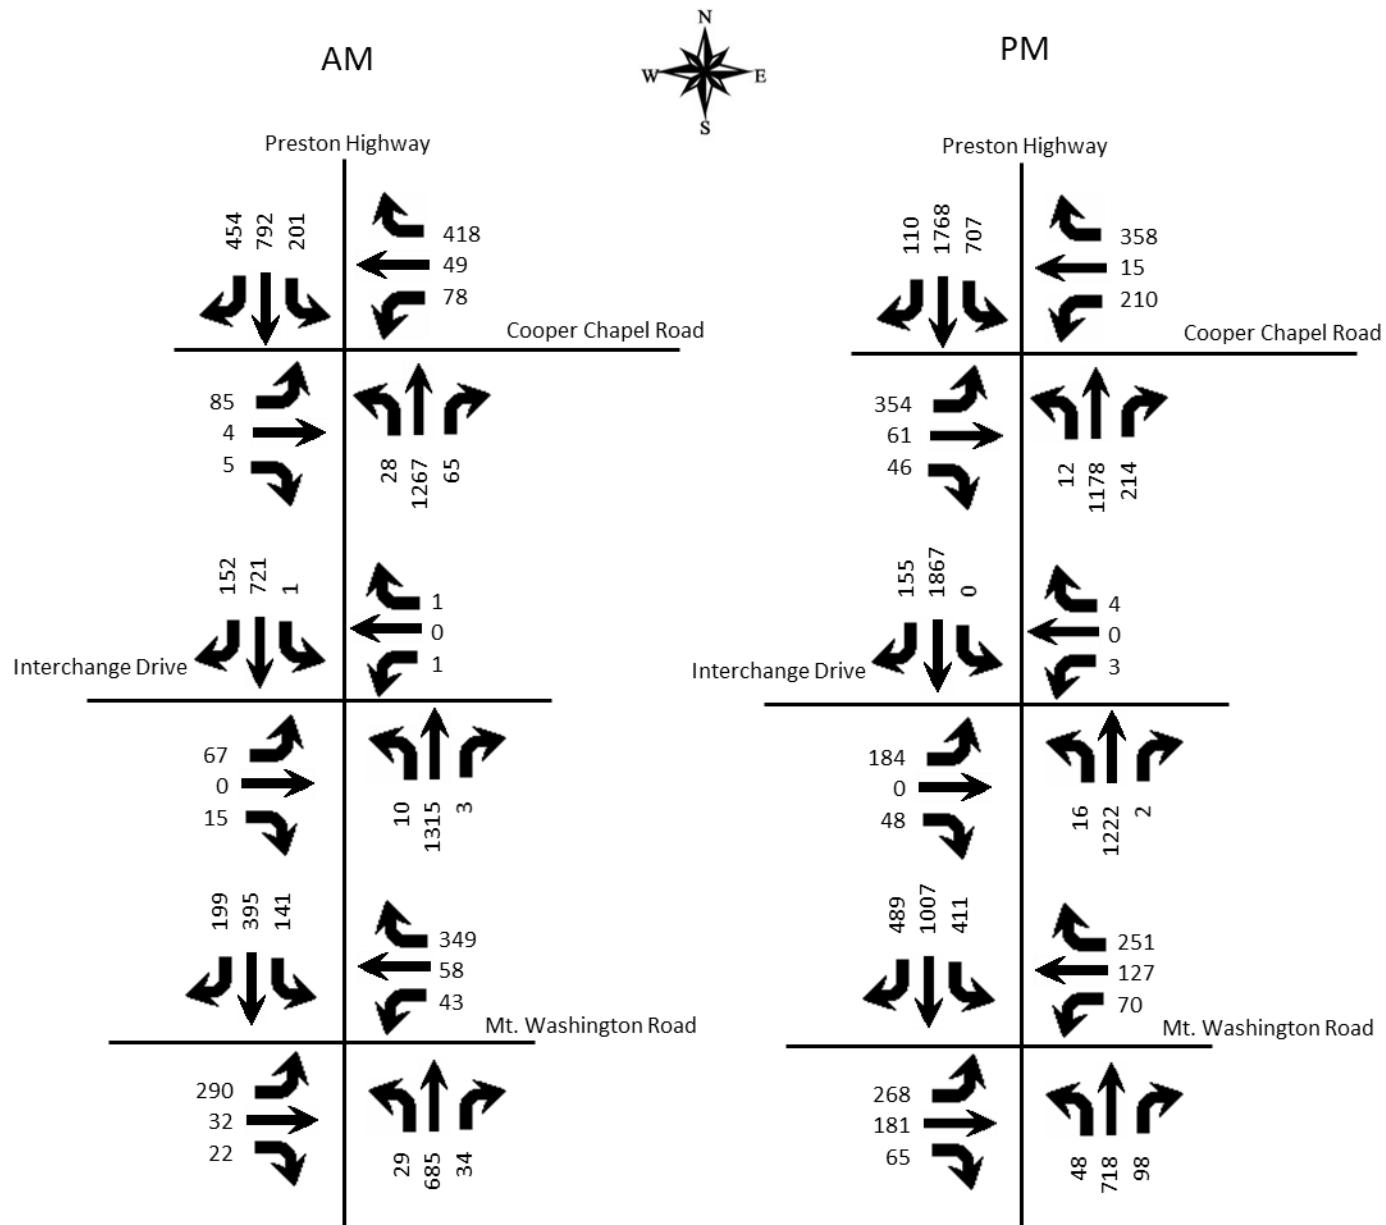

Figure 2. Existing Peak Hour Volumes

FUTURE CONDITIONS

The requested analysis year for this project is 2022. To predict traffic volumes in 2022, one half percent annual growth in traffic was added to the 2021 volumes. This growth rate is the same as was used in the Menards Traffic Impact Study dated April 9, 2019. **Figure 3** displays the 2022 No Build volumes.

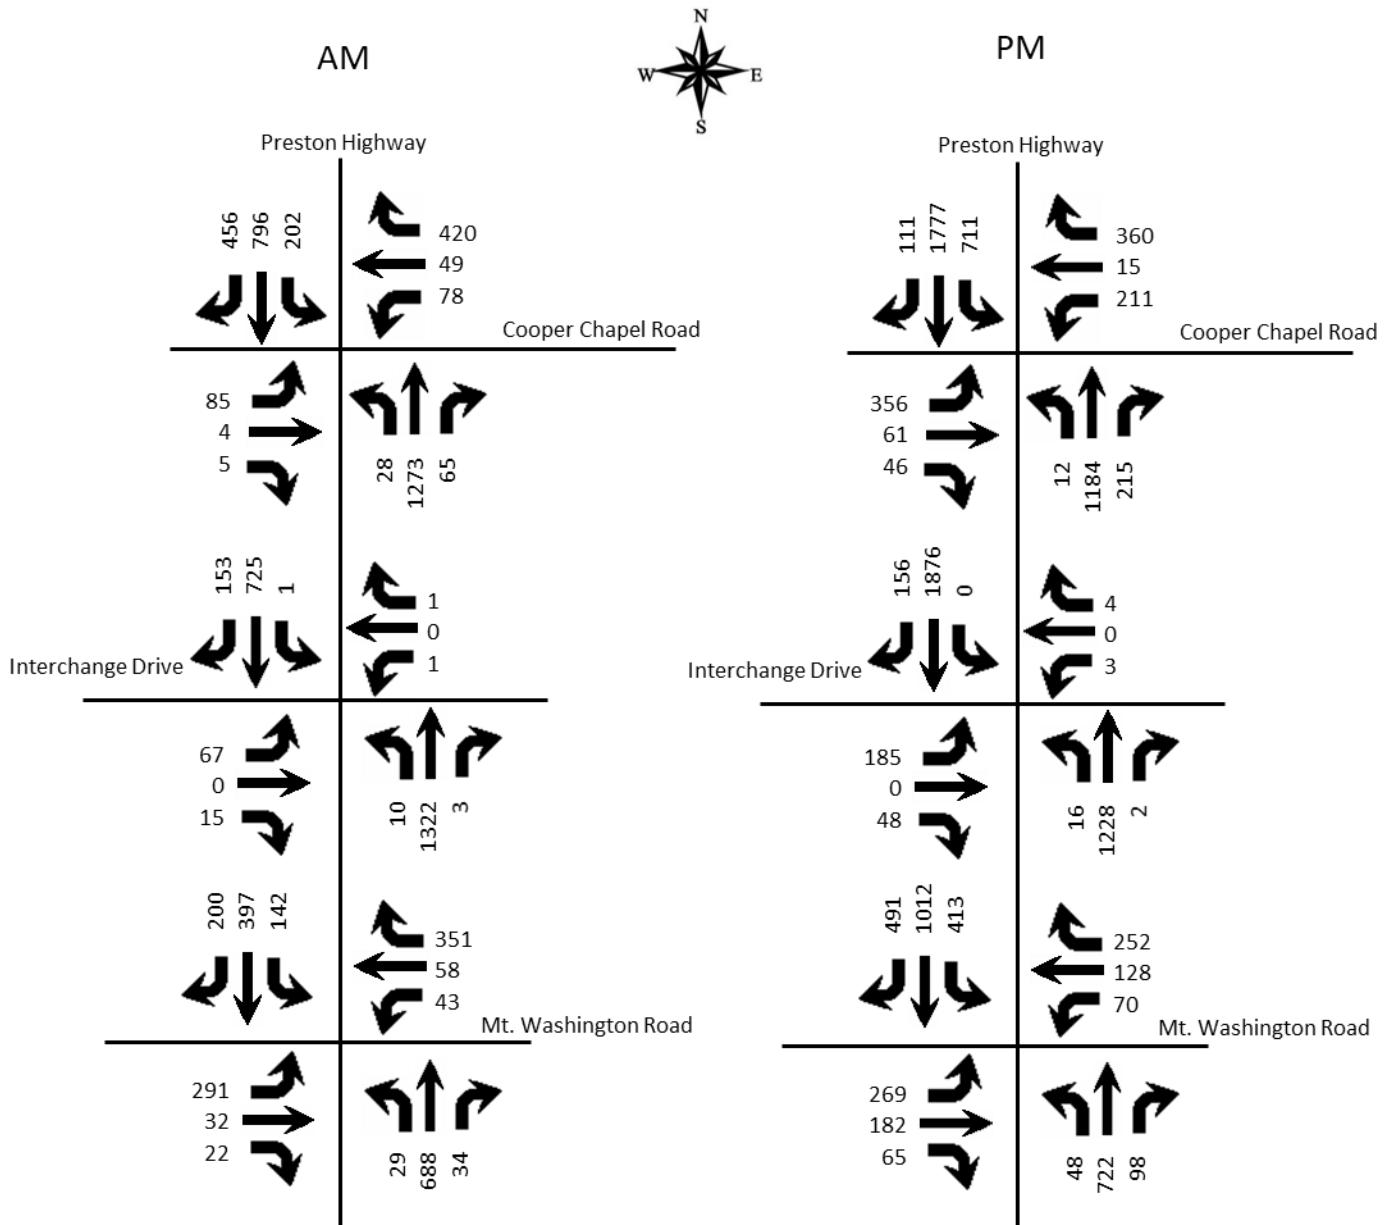

Figure 3. 2022 No Build Peak Hour Volumes

TRIP GENERATION

The Institute of Transportation Engineers Trip Generation Manual, 11th Edition contains trip generation rates for a wide range of developments. The land uses were reviewed and determined to be the best match. The trip generation

Preston Highway at Interchange Drive
Traffic Impact Study

results are listed in **Table 1**. At the request of KYTC, the peak hour of the generator has been used for the Fast-Food Restaurant with Drive-Through Window. The primary trips were assigned to the highway network with the percentages shown in **Figure 4**. The pass-by trips are assigned using the existing traffic passing the site. These trips are shown in parenthesis. **Figure 5** shows the trips generated by this development and distributed throughout the road network for the year 2022 during the peak hours. **Figure 6** displays the individual turning movements for the year 2022 for the peak hours when the development is completed.

Table 1. Peak Hour Trips Generated by Site

| Land Use | A.M. Peak Hour | | | | P.M. Peak Hour | | | |
|--|----------------|------------|------------|------------|----------------|------------|------------|------------|
| | Trips | In | Out | Pass-by | Trips | In | Out | Pass-by |
| Convenience Market with Gas (16 fueling spots) | 433 | 217 | 216 | 329 | 364 | 182 | 182 | 272 |
| Fast-Food with Drive-Through (6,740 sq ft) | 341 | 177 | 164 | 170 | 343 | 175 | 168 | 189 |
| Total | 774 | 394 | 380 | 499 | 707 | 357 | 350 | 461 |

ANALYSIS

The qualitative measure of operation for a roadway facility or intersection is evaluated by assigning a “Level of Service”. Level of Service is a ranking scale from A through F, “A” is the best operating condition and “F” is the worst. Level of Service results depend upon the facility that is analyzed. In this case, the Level of Service is based upon the total delay experienced at an intersection.

To evaluate the impact of the proposed development, the vehicle delays at the intersections were determined using procedures detailed in the Highway Capacity Manual, 6th edition. Future delays and Level of Service were determined for the intersections using the HCS Streets (version 7.9.5) software. The delays and Level of Service are summarized in **Table 2**.

Table 2. Peak Hour Level of Service

| Approach | A.M. | | | P.M. | | |
|---|---------------|---------------|---------------|---------------|---------------|---------------|

Key: *Level of Service, Delay in seconds per vehicle*

Preston Highway at Interchange Drive
Traffic Impact Study

The entrance that aligns with Interchange Drive was analyzed as a split phase signal, to allow the continued operation of the dual left turn lanes on Interchange Drive. The exit should have a dedicated left turn lane and a shared thru and right turn lane. The entrances were evaluated for turn lanes using the Kentucky Transportation Cabinet Highway Design Guidance Manual dated July, 2020. The traffic impact policy requires using volumes for ten years beyond build-out, or 2032. The 2032 volumes were determined applying a one-half percent annual growth rate from 2021. Figure 7 illustrates the 2032 No Build volumes. Figure 8 illustrates the 2032 Build Volumes. Using the volumes in Figure 8, a right turn lane will be required at the right-in/right-out entrance on Preston Highway. The right turn lane will be designed to KYTC standards. Table 3 summarizes the delay and Level of Service for 2032.

Key: Level of Service, Delay in seconds per vehicle

An additional comparison was made for the Interchange Drive intersection without the right-in right-out. The absence of the second entrance requires all the site traffic to use the signal at Interchange Drive. The results are shown in **Table 4**. In both a.m. and p.m. peaks the intersection functions better with the proposed right-in/ right-out.

Table 4. 2032 Comparison with and without Right-in/Right-out

| Approach | A.M. | | P.M. | |
|---|-------------------|-------------------------------------|-------------------|-------------------------------------|

| Preston Highway Southbound | C 22.8 | C 24.0 | D 37.9 | D 38.0 |

Key: Level of Service, Delay in seconds per vehicle

CONCLUSIONS

Based upon the volume of traffic generated by the development and the amount of traffic forecasted for the year 2022 and 2032, there will be an impact to the existing highway network. The proposed right-in/right-out provides improved operating conditions when compared to without the additional access. A right turn lane will be required at the right-in/right-out entrance on Preston Highway. The exit opposite Interchange Drive should have two lanes with a dedicated left and a shared thru/right. The southbound left turn lane will need additional storage.
